Remarks

Trip Charges*	Tolls/Parking*	Mileage* 50	Time of Arrival	Departure
Chargeable Items			6:45A	9:00A

* Travel time and mileage will be billed in accordance with the contract.

Summary of Services Performed (field test data, locations, elevations & depths are estimates) & Individuals Contacted.

The placement and consolidation of approximately 60 cubic yards of 3500 psi, non air-entrained concrete for footings and slab on grade. Please see attached sketch(s) for a more detailed location of materials placed during this site visit.

The required test limits of material placed were determined to be;

Slump = 3.00-5.00"

Air Content = 0-3%

Batch to placement time = <90 minutes

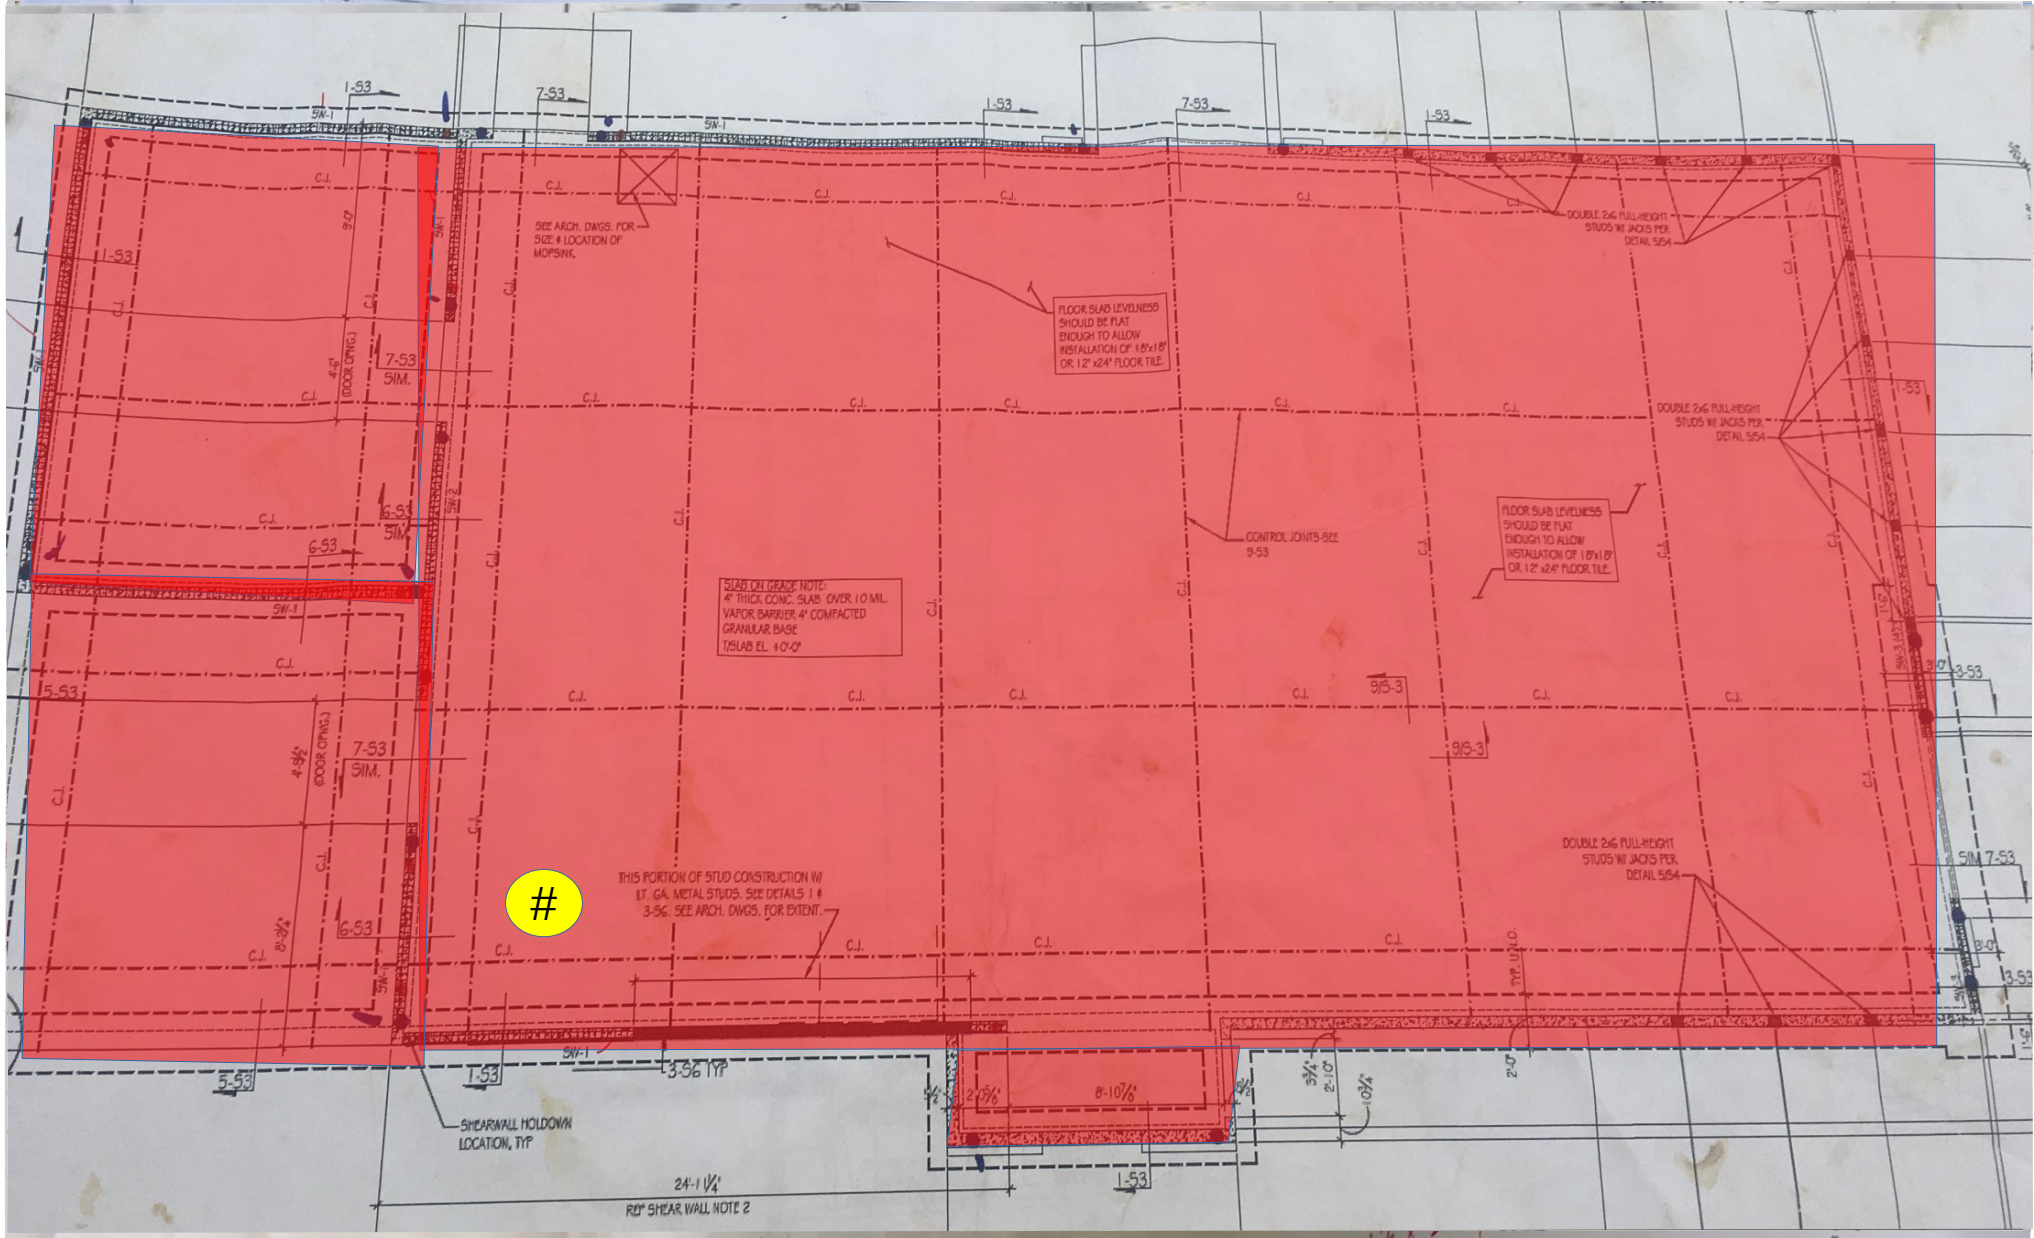

Concrete temperature = 50-90F

Concrete observed on this date did appear to be placed in compliance with project specifications with regard to temperature, slump, air content, and batch-to-placement time.

The following samples were obtained for comprehensive strength testing in our laboratory: 1 set(s) of (6) lab cylinders 3500 psi.

Contractor was notified of test results prior to departure from job site.

ECS will return, as needed, for additional services.
