MOST RESTRICTIVE

■ Non-Separated Use (508.3)
The required type of construction for the building shall be determined by applying the height and area limitations for each of the applicable occupancies to the entire building. The most restrictive type of construction, so determined, shall apply to the entire building.

☐ Separated Use (508.4) - See below for area calculations
For each story, the area of the occupancy shall be such that the sum of the ratios of the actual floor area of each use divided by the allowable floor area for each use shall not exceed 1.

Percent of frontage increase I = 100 [F/P - 0.25] x W/30 (N/A Not Applicable to the project means)

1 Frontage area increases from Section 506.2 are computed thus:
a. Perimeter which fronts a public way or open space having 20 feet minimum width = (F)
b. Total Building Perimeter ____ = (P)
c. Ratio (F/P) ____ = (F/P)
d. W = Minimum width of public way ____ = (W)
e. Percent of frontage increase I_f = 100 [F/P - 0.25] x W/30 ____ = (%)
2 The sprinkler increase per Section 506.3 is as follows:
a. Multi-story building I_s = 200 percent
b. Single story building I_s = 300 percent
3 Unlimited area applicable under conditions of Sections 507
4 Maximum Building Area = total number of stories in the building x E (506.4)
5 The maximum area of open parking garages must comply with 406.3.5. The maximum area of air traffic control towers must comply with 412.1.2.

(a) Budget U-factors are used for software baseline calculations ONLY, and are not code requirements.
(b) Fenestration product performance must be certified in accordance with NFRC and requires supporting documentation.

Air Leakage, Component Certification, and Vapor Retarder Requirements:

☑ 1. All joints and penetrations are caulked, gasketed or covered with a moisture vapor-permeable wrapping material installed in accordance with the manufacturer's installation instructions.
☑ 2. Windows, doors, and skylights certified as meeting leakage requirements.
☑ 3. Component R-values & U-factors labeled as certified.
☑ 4. No roof insulation is installed on a suspended ceiling with removable ceiling panels.
☑ 5. 'Other' components have supporting documentation for proposed U-Factors.
☑ 6. Insulation installed according to manufacturer's instructions, in substantial contact with the surface being insulated, and in a manner that achieves the rated R-value without compressing the insulation.
N/A 7. Shaft vents serving stairs and elevators integral to the building envelope are equipped with motorized dampers.
Exceptions:
Buildings without fire alarm system.
Stairway vents open to the exterior.
N/A 8. Cargo doors and loading dock doors are weather sealed.
☐ 9. Recessed lighting fixtures installed in the building envelope are Type IC rated as meeting ASTM E283, are sealed with gasket or caulk.
N/A 10. Building entrance doors have a vestibule equipped with self-closing devices.
Exceptions:
Building entrances with revolving doors.
Doors not intended to be used as a building entrance.
Doors that open directly from a space less than 3000 sq. ft. in area.
Doors used primarily to facilitate vehicular movement or materials handling and adjacent personnel doors.
Doors opening directly from a sleeping/dwelling unit.
Buildings less than four stories above grade and less than 10,000 ft2 in area.

Additional Efficiency Package Requirements:

☑ 1. The reduced interior lighting power option has been selected as the additional efficiency package required by this energy code. Requirements for this package are applied to the interior lighting allowance calculations. Full compliance with this efficiency option requires inspection and verification that the interior lighting allowances and fixture schedule found in the interior lighting report are compliant and deemed to pass.

Section 3: Compliance Statement

Compliance Statement: The proposed envelope design represented in this document is consistent with the building plans, specifications and other calculations submitted with this permit application. The proposed envelope system has been designed to meet the 2012 North Carolina Energy Conservation Code requirements in COM*check* Version 4.0.5.1 and to comply with the mandatory requirements in the Requirements Checklist.
