ECS Project No. 33:6169

To whom it may concern,

The purpose of this letter is to state to the Owner and the Engineer of Record, that to the best of our knowledge, the construction of the building has been completed in substantial conformance with the approved contract plans and specifications. In the capacity of owner's testing and inspection agency, ECS provided on-call monitoring and testing, and periodic reports have been issued. Those reports state that all the on-site inspections and laboratory testing have been performed on the subgrade soil/foundations, structural steel and cast-in-place concrete. Work requiring inspection was, to the best of the inspector's knowledge, in conformance with the approved plans and specifications.

Based upon our review and the provided information, there was one discrepancy remaining for the 5/8" bolts used for structural steel fastening. ECS confirms that although the specified method of bringing the bolting assemblies to the required values was not used, the 5/8" bolts were observed to be snug tight.

If you have any questions after reviewing this letter or the attachments, please contact us at (910) 401-3288.

Respectfully Submitted,

ECS SOUTHEAST, LLP
