General Information

Jeff Moore with Ecclesia Construction requested Terracon to be on site for Foundation Observations. Work is being performed by NCS Concrete. The results of observation(s) for today were reported to Jeff Moore with Ecclesia Construction.

Foundation and Soil Bearing Information

The near surface bearing materials were evaluated at the foundation(s) listed below. Bearing materials observed at the time of our visit were assumed to be at design bearing elevation unless noted otherwise. The bearing materials were evaluated utilizing the following method(s): dynamic cone penetrometer (DCP). Terracon observed the foundation(s) detailed below for the following items (as applicable): bearing pressure, bearing strata, size, and cleanliness.

Design Bearing Pressure(s) (psf) = 2000

Test Results	D	
rest kesuits	Bearing Strata	Status
BOF: 9,10,9 -1': 7,10,10 -2': 10,9,9 -3': 10,8,9	Dry Tan sand Native	Complies
BOF: 10,9,9 -1': 8,9,9 -2': 10,9,8 -3': 10,9,9	Dry Orange Tan Sand Native	Complies

Additional Comments

Evaluation and testing of foundation bearing materials typically consist of observation of the subgrade soils along with sampling and testing the soils to shallow depths below the assumed design bearing elevation at the location(s) indicated above. Small hand-operated equipment is typically used. As such, the results are limited by the means and methods used to obtain them. It should be noted that soil conditions not readily identified by these means may affect foundation performance.

Compliance Statement

Based on our observations of the foundation excavation(s), if the near-surface bearing materials remain consistent with depth, the foundation excavation(s) at the above reference location(s) appear to be in general accordance with the project plans and specifications.

Services: Evaluate excavated foundation subgrades for minimum design bearing capacity.
