CHARGING

Cycle Applications: Apply constant voltage charge at 2.35v/c - 2.45v/c (14.1 – 14.7v for 12v Monobloc) at 20°C. Initial charging current should be set at less than 0.25C Amps. Switch to float charge to avoid overcharging.

"Float" or "Stand-By" Service: Apply constant voltage charge of 2.25v/c – 2.30v/c (13.5 to 13.8 volts for 12v Monobloc at 20°C. When held at this voltage, the battery will seek its own current level and maintain itself in a fully charged condition.

Temperature Compensation: Charging Voltage for both Cyclic and Standby applications should be regulated in relation to ambient temperature. As temperature rises charging voltage should be reduced to prevent overcharge and increased as temperature falls to avoid undercharge.

For further charging information including temperature compensation factors, see Power Sonic Technical Manual/ Power Sonic Charger specifications.

APPLICATIONS

- High Rate UPS
- Data Centers

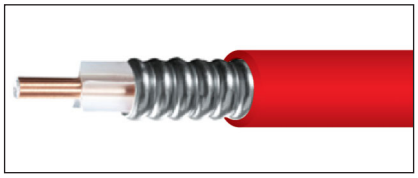
DESCRIPTION

1/2" ClearFill® Line **ALUMINUM PLENUM-RATED AIR-DIELECTRIC COAXIAL CABLE** for In-Building Applications

ClearFill® Line 1/2" low-loss air dielectric cable, Plenum-rated, CMP



FEATURES/BENEFITS

- *Supports Multiple RF Signals*
- *Complete Shielding.* The solid outer conductor of the ClearFill® Line coaxial cable creates a continuous RFI/EMI shield that minimizes system interference.
- *Outstanding Inter modulation Performance.* RFS coaxial cable's solid inner and outer conductors virtually eliminate inter mods. Inter modulation performance is also confirmed with state-of-the-art equipment at the RFS factory.
- *Wide Range of Applications.* Typical areas of application are feed lines for plenum-space installations within occupied buildings or structures but also suitable for outdoor use due to UV rating.
