Re: Water heaters for Chipotle – Steele Creek, NC
13415 Rigsby Rd
Charlotte, NC 28273

To Whom it may concern:

We have designed the proposed Chipotle Mexican Grill project at the above-referenced address to utilize two (2) Navien NPE-240A gas-fired instantaneous water heaters along with a dish machine with an integral booster heater. Each instantaneous water heater is capable of providing up to 6 GPM at a 65°F. temperature rise for a total of 12 GPM at a 65°F temperature rise. Based on our experience with how these restaurants operate and our experience from having this exact setup installed in hundreds of locations around the country, most of which see winter temperatures colder than Charlotte, North Carolina, I am confident that this design will prove to be adequate.

Sincerely,

Richard T. Jones, PE
National Engineering, Ltd
