### INITIAL START UP

Level unit using the adjustable feet under the unit (approximately 1/2" adjustment).

Before using the unit for the first time, clean and heat for approximately 30 minutes. The grill may emit a small amount of smoke as the cooking surfaces reach 300-350°F. Do not be alarmed, as the smoke is caused by oils associated with the manufacturing process and will stop when the grill reaches 400°F.

### SEASONING THE COOKING SURFACES (NON CHROME SURFACES)

#### FIRST TIME SEASONING

Follow your company/corporate guidelines for seasoning cooking surfaces. or

1. Bring the grill to 300°F and leave it on while doing the next three steps.
2. Brush the cooking surfaces with a **salt free** liquid vegetable oil. If using an aerosol agent, first apply into a cup and then brush onto cooking surface.
3. Let sit for 20 minutes, and then wipe clean using a warm damp cloth.

#### DAILY SEASONING

The grill should not require much seasoning while in use. In most cases, brush a light coating of a **salt free** liquid vegetable oil in the morning and occasionally throughout the day will be enough to prevent any sticking. It is not necessary to apply before grilling each item.

#### SETTING THE TEMPERATURE

The thermostat control knob is used to set the temperature to your requirements.

The maximum set point is 550°F (288°C), the minimum set point is 175°F (79°C).

See Knob Settings.

#### SETTING THE TIMER (TIMER MODELS ONLY)

(9 MIN. 59 SEC. MAX)

The timer may be factory pre-set. If changes are required follow these simple steps:

1. To increase time, press and hold the (UP) button.  
The Start/Stop button can now be used to increase the cooking time.

2. To decrease time, press and hold the (DOWN) button.  
The Start/Stop button can now be used to decrease cooking time.

When the timer reaches "00:00" the alarm will sound three times.

## KNOB SETTING

Knob Position	Approx. Temp
1-2	175°F / 79°C
3	200°F / 93°C
4	250°F / 121°C
5	300°F / 148°C
6	350°F / 176°C
7	400°F / 204°C
8	450°F / 232°C
9	500°F / 260°C
10	550°F / 287°C

## ON/OFF ROCKER SWITCH (TIMER MODELS ONLY)

The switch turns the unit on and off. The switch has three positions:

With the switch in this position, both top and bottom platens will heat.

With the switch in this position, neither platen will heat.

With the switch in this position only bottom platen will heat.

## DAILY OPERATION

Always allow 10-20 minutes of preheat time before loading the unit with product. Failure to allow sufficient preheat time will result in unsatisfactory cooking of the first load.

Check the power cord to insure that it is plugged into a proper outlet.

Check that the switch and thermostat control are turned on.

Set the unit's ON/OFF rocker switch to desired position.

Set the thermostat control knob to desired temperature.

## OPERATING HINTS AND SAFETY

Disconnect power to the unit with the switch at the end of each day of operation.

Do not leave the unit in operation without an attendant.

Turn thermostat down to 200°F (93°C) during idle periods. It will take only a few minutes to regain operating temperature.

Use spatula to push excess grease into grease drawer after each load of food is cooked. This will reduce smoking of hot grease and carbonizing.

Do not leave the unit at high temperature when not in use or during idle periods. This will cause food particles and grease film to carbonize.

"Season" cooking surfaces with non-salted vegetable oil to reduce product sticking.

## MONTHLY LUBRICATION/INSPECTION

Apply two (2) drops of non-toxic mineral or vegetable oil to counter balance shoulder rivets and plastic spacers.

Check and clean brass rollers to make sure they are rolling and not sliding on the cam surfaces of the counterbalance.

Check the bolts, screws and nuts, tighten if necessary.

## CLEANING (NON CHROME SURFACES)

Begin cleaning procedure by using the operating procedures within your organization, or follow the steps below:

1. If particles adhere to the cooking surface during the day, scrape them off with a spatula.

**NOTE:** It is best not to let food cook onto the grill, as food build-up on the grill will increase sticking and smoking. In addition, carbon may build up on the grill surface and reduce the cooking efficiency.

**CARBON BUILDUP:** *A black matter that forms on or near the cooking surface. Generally this is a combination of: releasing agents, oils, food particles etc. that has cooked itself to the surface. After a period of time without cleaning, this will reduce performance and material may start flaking off. When that happens, follow the "Carbon Cleaning" procedures.*

2. At the end of the day, wipe down all surfaces with a warm, damp cloth and mild detergent, then dry.

## CARBON CLEANING

When carbon build up occurs, use a carbon removal agent according to the instructions provided with the cleaner. When this process is complete, you must re-season the grill according to your company/ corporate guidelines, or the seasoning instructions in this manual.

**DO NOT IMMERSE OR LET THE UNIT STAND IN WATER.**

**DO NOT HOSE DOWN THE UNIT OR THE TABLE/COUNTER IF THE UNIT IS ON THE TABLE/COUNTER.**

**KEEP AWAY FROM RUNNING WATER.**

**DO NOT USE SHARP OBJECTS TO REMOVE CARBON BUILD-UP.**

**BEFORE CLEANING MAKE SURE POWER IS TURNED OFF, UNIT IS UNPLUGGED AND IS NOT TOO HOT.**

**While holding top lid with one hand, apply only cleaners which are safe for aluminum and iron surfaces. Wipe with clean sponge or towel until unit is clean.**

**DO NOT SPLASH FRONT CONTROL PANEL!**

**DO NOT SPLASH FLEX CONDUIT CONNECTING TOP AND BOTTOM OF THE UNIT.**

Remove and empty to clean grease catcher drawer as required using mild detergent and water.

## WARNING

Do not use ice or cold water to clean the cooking surfaces when the unit is hot.

The surfaces are cast aluminum or cast iron and may crack or deform under the shock of rapid temperature change.

## CLEANING (CHROME SURFACES)

It takes very little time and effort to keep this Industrial Chromium griddle surface sparkling clean and performing at top efficiency. **DO NOT** allow grease to accumulate as it will carbonize and become difficult to remove. To prevent this condition the following cleaning suggestions should be followed:

1. Remove excess grease and food regularly with a 4" (100mm) wide Razor Sharp type scraper with rounded corners and wipe surface with a damp cloth if desired.
2. Following the scraping, for end of the day cleaning, a damp cloth and a non-silicated, non-abrasive, non-chlorinated cleaner such as Bon-Ami may be used to wipe surface clean, followed by wiping with a clean wet cloth.
3. Use a clean cloth and good non-abrasive cleaner to clean the *(NON COOKING SURFACES)* stainless steel body of the griddle. Wipe the control panel front with a soft cloth.
4. At least once a day, remove the waste drawer and wash in the same way as an ordinary cooking utensil. The drawer is removed by pulling forward and out.

## CAUTION

1. **Never** use pumice, griddle stones, or abrasives on a chromium surface.
2. **Never** strike a chromium griddle surface with a sharp instrument or spatula edge.
3. **Never** use steel wool.
4. **Never** use commercial liquid grill cleaner on the griddle surface.
5. **Abusing** surface voids the warranty.

## **OPERATION AND MAINTENANCE OF ICM DISPENSERS:**

### **TICKET DISPLAY IN ICM DISPENSER:**

- **USE THE CLIP-ON NUMBERS PROVIDED ON EACH DISPLAY TICKET** - this has proven to speed up transaction times.
- **USE DISPLAY TICKETS PROVIDED BY YOUR LOTTERY** - These are usually the display tickets used in the Instant Ticket Vending Machines (ITVM's) that are usually 4" x 4". The ICM will easily display #20 of these tickets.
- **USE "VOID" TICKETS PROVIDED BY YOUR LOTTERY** - Actual size tickets that may need to be modified to get the maximum number displayed. Cutting off the bottom of the ticket is done by some states.
- **USE THE LAST "LIVE" TICKET FROM THE PACK** - Using the last ticket from the pack on the display tray allows the entire pack to be sold and then the last ticket sold off the display tray.

### **DISPLAY AND DISPENSING TRAY TIPS:**

- Place display tickets on the display tray for best viewing by the customers.
- To prevent doubling up the ticket packs in the base part of the dispenser should be "flexed" before being placed on the tray. Bowing the pack up slightly on both ends may make dispensing easier also.
- Do not feed the tickets over the top of the rods on each tray.

### **REPLACEABLE TOP GLASS:**

- The top glass will eventually become scratched and should be replaced:
- 1. If your lottery provides replacement glass, ask your lottery rep. to provide new top piece.
- 2. If your lottery does not provide replacement glass, contact TAT using the information below.
- 3. The bottom glass is sealed in place to prevent spills from getting into the dispenser;

**ALWAYS USE A PIECE OF TOP GLASS IN THE UNIT. ONCE THE SEALED IN BOTTOM GLASS IS SCRATCHED, IT IS DIFFICULT TO REPLACE.**

**QUESTIONS or NEED GLASS?** Call us at (800) 253-4295

## FUNCTION

The Mk90 is a CO2 monitor with integrated sound and light Alarm indication, designed to measure CO2 concentration in a confined space environment. It provides an alarm in the event that a CO2 level considered unhealthy/dangerous is reached, in accordance with existing safety codes, in the area being monitored.

Installed properly, the Mk90 will continuously monitor the CO2 concentration that it is exposed to. A light emitting diode (LED) indicates that the Mk90 is running properly. The Mk90 performs a self-calibration at regular intervals insuring calibration under normal circumstances. This eliminates the need of manual calibration in a normal environment. The sensor uses infrared analysis for detecting CO2.

## ALTITUDE ADJUSTMENT

The Mk90 CO2 sensor has a manual altitude adjustment.

## ALARM LEVELS

The alarm levels can be changed to any level to comply with all local Safety Codes and legislations.

The default CO2 alarm levels are:

5 000 ppm	CO2 Awareness indication
5 000 ppm	TWA Alarm/8h (PEL)
1.5% (15 000 ppm)	Low-Alarm ½ STEL
3.0% (30 000 ppm)	High-Alarm STEL

## APPROVALS

CE, EN55022 :2006/A1 :2007, EN55024/A2 :2003, EN61000-3-2 : 2006, EN61000-3-3/A2 :2006, AS/NZS CISPR 22 :2006, IEC/EN :IT55022/55024, LNE Règle de certification NF 128 rev 12 Nov 2007 (§2.1.2.4.3.) for the S8 CO2 Sensor Module. UL Certified. DIN6653-2:2004-03.

### FEATURES & BENEFITS

#### ■ Hydrocarbon Refrigerants (R-290)

1/5" condenser pin gaps and electrodeposition coating allow the condenser to stay clean and prevents it from becoming tarnished, further guaranteeing the durability of the condenser

#### ■ Tempered, energy-saving, low emissivity glass sliding top

Reduced outer heat gain and lowers energy consumption. It enhances energy efficiency and minimizes condensation.

#### ■ High-density polyurethane insulation

The entire cabinet structure and solid doors are foamed-in-place using high density, CFC free polyurethane insulation.

#### ■ Manual defrost system

#### ■ Wire baskets come standard

#### ■ White, anti-rust coating on the exterior reduces fingerprints

## Notes:

- For high-glide refrigerants, use dew point for unit sizing. Adjust evaporator pressure as needed to maintain discharge air temperatures.
- Baseline Evaporator Btu/h based on parallel rack system, LED lighting (Zero Zone ChillBrite® 4190), standard-energy doors (Zero Zone CoolView® Envision®), and ECM or SSC electronic fan motors.
- For condensing units (non-rack system), multiply total Btu/h rating by 1.06.
- Amps are based on electrical nameplate values. Watts are based on laboratory observations of actual energy use.
- One fan motor per door.
- Door (Anti-Sweat) Options: standard-energy and high-humidity package = heated glass and heated rails; solid doors = heated rails. All options include mullion and sill heat.

- Anti-Sweat Controller required for the high humidity package to comply with DOE energy requirements.
- Electric Defrost: 1 per day. Defrost termination temperature setting is 50°F. Failsafe time is 55 minutes. Refer to the Installation & Operation Manual for details.
- Hot Gas Defrost: 1 per day. Defrost termination temperature setting is 65°F. Failsafe time is 30 minutes. Refer to the Installation & Operation Manual for details. Zero Zone recommends 1 riser per refrigeration circuit when utilizing hot gas defrost.
- Individual risers for circuits of more than one case require refrigeration line sizing by Zero Zone.

### RSC6 FEATURES & BENEFITS

**Refrigeration System:** Holds desired product temperature and seals in freshness to extend product life. RSC refrigeration options include both remote outdoor condensing systems and top-mount self contained systems. Depending on the model, remote options are available with hermetic, scroll, or energy saving inverter scroll compressors. Due to the overall combined height of the RSC plus condenser, self-contained condensing systems must be installed once the showcase has been placed on location.

**Energy Reducing Auto Defrost:** Controller will adapt to environmental conditions and perform auto defrost cycles when necessary. A typical showcase is programmed to defrost every 2 to 4 hours resulting in 6 to 12 cycles per day. The RSC performs two timed defrosts per day and then the auto defrost operates only when required which significantly improves product temperature control and reduces energy consumption.

**Monitoring Capabilities:** The RSC controller uses MODBUS communication protocol allowing for on-line monitoring and set-point adjustments to be made from a central location using an EMS system.

#### Read / Monitor

- Ambient temperature
- Evap coil temperature
- Evap air out temperature
- Evap outlet temperature
- Evap outlet pressure
- Defrost cycle

#### Adjust

- Temperature set point  
(within limits)

**Shelf Configurations (14):** Increase product capacity with multiple shelf configurations. The RSC6 comes with 14 adjustable glass shelves (7 per side). Top 5 shelves can be tilted. Metal shelves and peg rack options available.

**LED Lighting:** LED lighting creates an attractive selling environment while reducing energy and maintenance costs.

**Product Display:** Extended depth and low deck allow for increased storage and product capacity. Low deck creates optimum display space for gallon jugs, milk, juice & 12 or 24 packs of beverages.

**Whisper Quiet Operation:** Evaporator fans and air flow operate at less than 65dB at 4ft so your customers will focus on the product selection and not the sound of the equipment.

**Joinable Design:** Allows for a wide variety of unit placement options. The RSC can be joined together with other RSC models to create multiple width configurations.

**Meets NSF Tier II Standards:** The RSC continues to perform at a higher ambient store temperature (80°F). Rest assured that the RSC will perform perfectly even on the warmest days.

## Power supply

The 4-conductor Rnet cable from a controller supplies power to the Rnet, but the amount of power varies by controller. If the total power required by the sensors on the Rnet exceeds the power supplied by the Rnet port, you will need to use an external power supply. Use the above power requirements to calculate the power required and the size of the external power supply.

**NOTE** The controller and the external power supply must share a common ground.

### RSC6 FEATURES & BENEFITS

**Refrigeration System:** Holds desired product temperature and seals in freshness to extend product life. RSC refrigeration options include both remote outdoor condensing systems and top-mount self contained systems. Depending on the model, remote options are available with hermetic, scroll, or energy saving inverter scroll compressors. Due to the overall combined height of the RSC plus condenser, self-contained condensing systems must be installed once the showcase has been placed on location.

**Energy Reducing Auto Defrost:** Controller will adapt to environmental conditions and perform auto defrost cycles when necessary. A typical showcase is programmed to defrost every 2 to 4 hours resulting in 6 to 12 cycles per day. The RSC performs two timed defrosts per day and then the auto defrost operates only when required which significantly improves product temperature control and reduces energy consumption.

**Monitoring Capabilities:** The RSC controller uses MODBUS communication protocol allowing for on-line monitoring and set-point adjustments to be made from a central location using an EMS system.

#### Read / Monitor

- Ambient temperature
- Evap coil temperature
- Evap air out temperature
- Evap outlet temperature
- Evap outlet pressure
- Defrost cycle

#### Adjust

- Temperature set point  
(within limits)

**Shelf Configurations (14):** Increase product capacity with multiple shelf configurations. The RSC6 comes with 14 adjustable glass shelves (7 per side). Top 5 shelves can be tilted. Metal shelves and peg rack options available.

**LED Lighting:** LED lighting creates an attractive selling environment while reducing energy and maintenance costs.

**Product Display:** Extended depth and low deck allow for increased storage and product capacity. Low deck creates optimum display space for gallon jugs, milk, juice & 12 or 24 packs of beverages.

**Whisper Quiet Operation:** Evaporator fans and air flow operate at less than 65dB at 4ft so your customers will focus on the product selection and not the sound of the equipment.

**Joinable Design:** Allows for a wide variety of unit placement options. The RSC can be joined together with other RSC models to create multiple width configurations.

**Meets NSF Tier II Standards:** The RSC continues to perform at a higher ambient store temperature (80°F). Rest assured that the RSC will perform perfectly even on the warmest days.

Hollow Metal or Stainless Steel

Minor scuffing or scratching of the primer paint on hollow metal is normal and should be handled by the finish painter after construction of your project is complete to ensure a lasting product. To determine rough opening for cased open frames: Add 2 3/4" to door opening width, and add 1" to door opening height.

- A. Begin installation by pushing the top of one jamb over the wall.
- B. Hold the top in place then push the bottom in towards and over the wall.

## GLHD-3 3 STEP PRO GRADE STEEL

**GORILLA LADDERS®**

EXCLUSIVELY AT

### ▶ COMPLETE PROJECTS EASILY

The 3-Step Pro Grade Steel is extremely tough, durable, and easy to use. The innovative design allows the stool to be opened and closed easily with one hand, and the built-in project top is perfect for tools and hardware. The slim-fold design allows the ladder to fold up to under 4 inches thick, making this 3-Step Pro Steel Step Stool the perfect tool for all your projects.

### ▶ BIGGER IS BETTER

The step stool features a giant top platform step for comfort, safety, and stability. The lower steps are also oversized, which means more comfort and less fatigue when using the stool for long periods of time.

### ▶ SAFETY

Non-slip tread and oversized non-marring feet improve stability.

### ▶ SECURITY

Safety latch keeps platform in place.
