Re: 2637 Cypress Rd.
Cameron, NC 28326

Dear Mr. Burgess,

SNS Engineering, Inc. (SNS) performed a site visit on May 9, 2019. The purpose of the site visit was to inspect the bonding of the pool. At the time of the inspection, the pool was constructed and had water in the pool. The concrete had been poured and currently covered the bonding wire. SNS used a magnetic locator to verify that the bonding wire was located 18 to 24 inches away from the edge of the water. The pool was also tested to maintain equal potential/resistance for all metal parts located within 5 feet of the pool.

This letter certifies that the pool met those standards. SNS did notice that there was metal fencing that was not installed at the time of inspection. This metal fencing must be bonded if it is installed within 5 feet of the water.

Thank you for this opportunity to serve you. Please contact SNS Engineering, Inc. for any further information.

Sincerely,

A handwritten signature in black ink that reads 'A. Scott Matthews'.

A. Scott Matthews, PE, PLS
Principal
