Mr. Keith Holm

Reference: Preliminary Soil Investigation
Tract 1 (1.24 Acre)

Dear Mr. Holm,

A soil investigation has been conducted at the above referenced property, located on the northeastern side of Patterson Road (SR 1269) in the Upper Little River Township of Harnett County, North Carolina. The purpose of the investigation was to determine the ability of this lot to support a subsurface sewage waste disposal system and repair area for a typical three-bedroom home. All soil ratings and determinations were made in accordance with "Laws and Rules for Sewage Treatment and Disposal Systems, 15A NCAC 18A .1900". It is our understanding that individual septic systems and public water supplies will be utilized at this site. The maximum house footprint used for this evaluation was 50 X 50 feet.

A portion of this lot was found to be underlain by provisionally suitable soils for subsurface sewage waste disposal. These provisionally suitable soils were observed to be firm and friable sandy clay loams to greater than 24 inches and appear adequate to support long term acceptance rates of 0.4 gal/day/sqft. It appears that the soils on this lot are adequate to support a conventional septic system and repair area for one residence.

This soil investigation report and map, when provided to the Harnett County Health Department, should allow them to sign the maps for recordation. I appreciate the opportunity to provide this service and hope to be allowed to assist you again in the future. If you have any questions or need additional information, please contact me at your convenience.

Sincerely,

A handwritten signature in black ink that reads "Hal Owen". The signature is written in a cursive, flowing style.

Hal Owen
