Dear Sir/Madam:

I made an onsite visit to the above referenced Residential site on April 25, 2022. The purpose of the visit was to examine the Monolithic Slab that had been placed for a 24' wide by 25'deep prefab steel garage. I asked the owner to dig several holes adjacent to the slab edge to revel the depth. At all locations, the slab edge was 6" or more. The steel frames supporting the building were 4' on center. With the minimum amount of load applied on the slab, I I have no problem approving the Monolithic Slab. The slab edge will support the live and dead loads as specified in the North Carolina Residential Building Code, 2018,ed.

If you have any questions, please feel free to contact me @ 919-774-6074.

Sincerely,

*Robert J. Bracken*
