Structural Narrative

The structural calculations and drawings enclosed support the use of FSI SmartJacks for mitigation of observed structural settlements, and support of the vertical loads tributary to it, at a residential property located in Angier, NC as referenced on the coversheet. Smart Jacks consist of a 3.5" diameter steel pipe attached to a plate by a 1.25" diameter adjustable threaded rod. This plate is attached to the bottom side of a supporting beam with (4) bolts with nuts. The steel pipe sits in a pre-fabricated base plate that bears on a 24" square x 24" deep compacted gravel base.
