Reference: Preliminary Soil Investigation
Tract 7 Winston SD (10 Acres), PIN 0546-54-5917.000

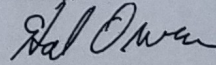

Dear Mrs. Yarborough,

A site investigation has been conducted for the above referenced property, located on the southern side of McLean Chapel Church Road (SR 2030) in the Stewart's Creek Township of Harnett County, North Carolina. The purpose of this investigation was to determine the site's ability to support a subsurface sewage waste disposal systems and repair area for a typical four bedroom home. All sewage disposal ratings and determinations were made in accordance with "Laws and Rules for Sewage Treatment and Disposal Systems, 15A NCAC 18A .1900". This report represents my professional opinion as a Licensed Soil Scientist but does not guarantee or represent permit approval for any lot by the local Health Department. An improvement permit for all residences will need to be obtained from the Health Department that specifies the proposed home size and location, and the design and location of the septic system to be installed.

This property is composed of a mixture of soils that range from provisionally suitable to unsuitable for subsurface sewage waste disposal (see attached map). The soils shown as provisionally suitable will adequately function as sewage waste disposal sites but will require additional drainline due to clayey textured subsoil characteristics. You should expect that approximately 100 feet of conventional drainline would be required for each bedroom in a proposed home. This property appears adequate to support the septic disposal needs of at least one four bedroom home.

I appreciate the opportunity to provide this service and trust that you will feel free to call on me again in the future. If you have any questions or need additional information, please contact me at your convenience.

Sincerely,

Hal Owen
Licensed Soil Scientist
