Re: Elevated Manufactured Home Inspection  
17 Carriage Ln  
Angier, NC

Dear Sirs:

An inspection has been performed on the anchoring system of the manufactured home described above. More than one-fourth of the main I-beam support piers exceed 36" in height. The stabilizing system has been designed for the height of the home and the wind, live, and dead loads specified by the State of North Carolina Regulations for Manufactured Homes.

The anchoring system, including, anchors, straps and piers, are structurally adequate as installed for the specified loads and site conditions. The location and type of each tie down is shown on the attached sheet 2 of 2.

Sincerely,

Travis M. Person, PE
