HEALTH QUESTIONNAIRE

Current Height _____

NAME _____

Current Weight _____

NOTICE TO APPLICANT: PLEASE ANSWER ALL OF THE FOLLOWING QUESTIONS in the Health Questions Sections. If any question in Section 1 is answered "YES", the applicant is not eligible for coverage. If any question(s) in Section 2 is answered "YES", the applicant may be eligible for coverage. Please verify the accuracy and completeness of the health information on this application. Incomplete or false information could jeopardize future claims.

HEALTH QUESTIONS SECTION # 1

.....IF ANY QUESTION 1-8 IS ANSWERED "YES", THE APPLICANT IS NOT ELIGIBLE FOR COVERAGE.....

- 1. Are you currently:
A. Hospitalized confined to a nursing facility, bedridden or require the use of a wheelchair or motorized mobility aid? YES NO
B. Receiving hospice, home health care or physical therapy? YES NO
2. Have you ever been medically diagnosed or treated for diabetes:
A. That requires insulin or more than (2) two oral medications? YES NO
B. With history of heart attack, stroke or any kidney disease? YES NO
C. With complications including retinopathy, neuropathy or peripheral vascular disease? YES NO
3. If you have diabetes in conjunction with high blood pressure, have there been any changes or adjustments in your medications because of uncontrolled blood sugar in the past 24 months? (If you do not have diabetes this question should be answered "NO") YES NO
4. Have you ever had or been advised to have any bone marrow transplant, stem cell transplant, an organ transplant or any amputation caused by disease? YES NO
5. At any time have you been medically diagnosed with, treated for, or had surgery for any of the following:
A. Alzheimer's disease, senile dementia, or any other cognitive disorder? YES NO
B. Emphysema, chronic obstructive pulmonary disease (COPD), sarcoidosis, or any pulmonary condition treated with supplemental oxygen or a nebulizer? YES NO
C. Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis (Lou Gehrig's disease), muscular dystrophy or cerebral palsy? YES NO
D. Lupus, scleroderma, myasthenia gravis or Paget's disease? YES NO
E. Osteoporosis with fracture(s), crippling/disabling arthritis or rheumatoid arthritis? YES NO
F. Chronic hepatitis, cirrhosis of the liver, Crohn's disease or ulcerative colitis? YES NO
G. Retinopathy, wet macular degeneration or any eye condition that required injection(s)? YES NO
H. Addison's disease, Hodgkin's Disease, kidney failure or ever had kidney dialysis? YES NO
I. Congestive heart failure or a cardiac defibrillator? YES NO
J. Lymphoma, leukemia, multiple myeloma or more than (1) one occurrence of internal cancer? YES NO
K. Acquired immune deficiency syndrome (AIDS), AIDS related complex (ARC), or human immunodeficiency virus (HIV) infection? YES NO
6. Within the past (5) five years, have you been treated for, or been advised to have treatment for;
A. Hepatitis C, alcoholism, drug abuse, or had a mental or nervous disorder requiring a hospital confinement? YES NO
B. Any condition that resulted in chemotherapy or radiation treatments? YES NO
C. Osteopenia, Osteoporosis or any Arthritic condition whereas treatment included infusions(s) or injection(s)? YES NO
7. Within the past (2) two years, have you been treated for, or been advised to have treatment for:
A. Heart attack, cardiomyopathy, an enlarged heart, Stroke or transient ischemic attack (TIA)? YES NO
B. Coronary bypass surgery, heart valve surgery, aneurysm, angioplasty, or vascular surgery including stent(s) placement and or artery blockage? YES NO
C. Heart rhythm disorder, Atrial fibrillation (AFIB) or have you had a pacemaker implanted? YES NO
D. Any form of Internal cancer or melanoma? YES NO

STEP 1 - FOUNDATION AND FLOOR

Start with selecting a proper site for the shed foundation, ideally a flat solid surface away from any large trees.

The first step is cut ten 2x6 lumbers to 15'-9" length, and two 2x6 lumbers to 12'-0". Next, place the five 12' 4x4 lumbers parallel to each other at 48" apart. Then, assemble the 2x6 perimeter frames on top, this will outline the overall floor frame. Drill pilot holes through the joists and secure with 3 1/2" screws. Finally, install the eight 2x6 floor joists at 16" O.C. to complete the foundation.

FLOOR FRAMING PLAN

After the floor frame is secured, cut the tongue and groove 23/32" plywood to size and attach to the frame. You'll need 6 full sheets to cover the 192SF floor area. These sheets usually come in standard sizes of 48" x 96". Insert 2" deck screws every 8" along the joint, don't leave any gaps between the sheets. Refer to the cut pattern below:

STEP 3 – ROOF

The roof will require a total of 10 identical gable kingpost style trusses, installed 20" O.C. There are also two cross bracing placed on both ends for added stability. The trusses are designed to have an overhang of 10" on both sides. Refer to the truss detail page for dimensions and assembly instructions.

Tip: make 1 truss first and make sure everything fits in place.

Now that all 4 wall frames are done, time to put them together!

First, line up the edges of the front and side wall frame with the floor frame perimeter. Make sure edges line up and there's no gaps, use a spirit level if needed. Then, drill pilot holes through the bottom wall plate, and insert 3 ½" screws to secure wall frame to the floor. After both wall frames are secured, lock the adjacent walls together by inserting 3 ½" screws or nails.

Repeat and assemble all 4 wall frames.

Assemble and secure frames with 3 ½" nails

The east side wall is built with 15 2x4 wall studs at 7'-5 3/4" length, spaced 16" apart on center. The top and bottom plates are 15'-5" 2x4's, with the double top plate at 16'-0". Drill pilot holes through the plate and insert 3 1/2" screws to secure the studs.

EAST SIDE WALL FRAMING

Continue the build by assembling the 2 side wall frames. Cut two 2 x 4's lumber to 15'-5" as top and bottom plate, then a full 16' 2 x 4 as the double top plate. then cut 12 2 x 4's to 7'-5 3/4" for the wall studs. The single door studs are 6'-3 1/2" in length.

See door and window detail for detailed build dimensions.

Next up is the building up the shed's back wall. Cut two 2 x 4's to 12' length, and 12 more 2 x 4's to 7'-5 3/4" length. Then cut out a 11'-5" 2 x 4 as the double top plate. Follow the framing plan below.

Space the wall studs to 16" O.C. matching the width of the front wall frame. Drill pilot holes through the plate and insert 3 1/2" screws to secure the studs.

STEP 4 – EXTERIOR SIDINGS

Next up is installing the exterior shed sidings, it's easier to do this first before adding in the roof trims.

Measure and cut 16 T1-11 plywood siding panels to size. These shed panels are designed to interlock, so plan them out accordingly. These siding panels also come in standard sizes of 96" x 48", you'll need about 496SF to cover the entire shed.

For the front wall siding, measure and cut out the door and window openings before installing. The rough double door opening is 72" x 77", rough opening for single door is 36" x 77", and the optional window opening is 2'-11 1/4" x 2'-11 3/8".

After all the purlins are secured in place, measure and cut the 3/4" plywood panels to size. These sheets usually come in standard 96" x 48" size, you'll need about 295SF to cover the entire roof area. Insert 2 1/2" nails into the purlins at about every 10" to lock the plywood sheets in place.
