

Here is the information you requested. There is a fire alarm/ CO2 monitor wired into the home with the other alarms already and I drew it into the plan. The windows both already existed and I measured them and drew them into the plan as well. This is the third floor attic of our home and the stairs go to the inside of our house on the second floor. I also noted the size of the door which is just going to be a standard door size 80x30. Let me know if you have any other questions or concerns.

Thank you

Grace Ponto
