RE: Application for New Septic Tank Improvement Permit

Dear Christopher Smith,

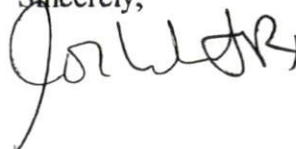

A site evaluation was conducted on lot 6 on 5-24-01. The site has limitations on the type of system that can be installed. These limitation require that a low pressure pipe system be installed on your lot.

You are required to submit a design for the low pressure pipe system. The design must come from an engineer, or from someone with a working knowledge of this type of system. A field layout of system and repair must also be done. The design must be approved by the Environmental health Section prior to the issuance of the improvement permit.

As of July 1, 1992, a contract must be executed between the system's owner and a management entity (a certified waste-water operator) prior to the issuance of an operations permit. This contract will be for the required maintenance of the system. The contract shall include the specific requirements for maintenance and operation, responsibilities for the owner and the system operator, provisions that the contract shall be in effect for as long as the system is in use and other requirements for the continued proper performance of the system. It shall also be a condition of the Operational Permit that subsequent owners of the system execute such a contract. A copy of the list of Certified Waste Water Operators in Harnett County and the surrounding counties is enclosed for your convenience.

If there are any questions, please contact me, Monday-Friday, from 8:00 a.m. - 9:00 a.m. at 893-7547.

Sincerely,

## ALTERNATIVE SEPTIC TANK SYSTEM DESIGN
