Re: Soil evaluations and final septic recommendations, Lots 101 - 124 & 126 - 155,
Woodshire Subdivision, Lemuel Black Road, Harnett County, North Carolina

To whom it may concern,

A preliminary soils investigation has been completed for each of the above referenced lots. The property is located off Lemuel Black Road as shown on the accompanying map. The purpose of the investigation was to determine the ability of the soil to support any subsurface waste disposal system for each proposed lot. Lots will be served by public water. All ratings and determinations were made in accordance with "Laws and Rules for Sanitary Sewage Collection, Treatment, and Disposal, 15A NCAC 18A .1900".

Each of lots 101 - 114, 117 - 124 & 126 - 155 appears to contain at least one area that meets minimum criteria for subsurface waste disposal systems for at least a typical 3 bedroom home (may include the use of conventional drainlines, gravelless drainlines, low pressure pipe, pumps, fill, large diameter pipe, french drains, pretreatment, etc.). Soil characteristics in the usable areas were dominantly provisionally suitable to at least 18 inches (fill or pretreatment) or 24 inches (conventional or LPP) including .1940, .1941, .1942, .1943, .1944 and .1945. A soil map indicating typical soil areas that meet these criteria is enclosed. Each of the lots appears to contain sufficient available space for a repair area for at least a typical 3 bedroom home (may include the use of any of the systems mentioned above).

Each of lots 115 and 116 appear to contain similar soils as previously described. These lots are limited by setbacks from a sediment basin in the middle of these two lots. These lots could require 2 bedroom homes, but may allow for 3 bedrooms by using alternative systems (final determination upon design).
