**Trenco**  
818 Soundside Rd  
Edenton, NC 27932

Rc: J75698  
New Century / Lot 194 Crestview

The truss drawing(s) referenced below have been prepared by Truss Engineering Co. under my direct supervision based on the parameters provided by Comtech, Inc - Fayetteville.

Pages or sheets covered by this seal: E4538922 thru E4538922

My license renewal date for the state of North Carolina is December 31, 2007.

November 29, 2007

Lassiter, Frank

The seal on these drawings indicate acceptance of professional engineering responsibility solely for the truss components shown. The suitability and use of this component for any particular building is the responsibility of the building designer, per ANSI/TPI-2002 Chapter 2.  
Engineering services provided by Truss Engineering Company.

- NOTES (7)
- 1) Unbalanced floor live loads have been considered for this design.
  - 2) This truss is designed in accordance with the 2003 International Residential Code sections R502.11.1 and R602.10.2 and referenced standard ANSI/TPI 1.
  - 3) Recommend 2x8 strongbacks, on edge, spaced at 10-0-0 oc and fastened to each truss with 3-16d nails. Strongbacks to be attached to walls at their outer ends or restrained by other means.
  - 4) CAUTION, Do not erect truss backwards.
  - 5) Hanger(s) or other connection device(s) shall be provided sufficient to support concentrated load(s) 1800 lb down at 0-5-4 on top chord. The design/connection of such connection device(s) is the responsibility of others.
  - 6) In the LOAD CASE(S) section, loads applied to the face of the truss are noted as front (F) or back (B).
  - 7) HARNETT COUNTY, NORTH CAROLINA

LOAD CASE(S) Standard

# Symbols

## PLATE LOCATION AND ORIENTATION

Center plate on joint unless x, y offsets are indicated. Dimensions are in 1/4-in. increments. Apply plates to both sides of truss and fully embed teeth.

\*For 4 x 2 orientator, locate plates 0 1/4" from outside edge of truss.

\*This symbol indicates the required direction of slots in connector plates.

\*Plate location details available in **MITek 20/20 software** or upon request.

## PLATE SIZE

4 X 4

The first dimension is the plate width measured perpendicular to slots. Second dimension is the length parallel to slots.

## LATERAL BRACING LOCATION

Indicated by symbol shown and/or by text in the bracing section of the output. Use T, I or Eliminator bracing if indicated.

## BEARING

Indicates location where bearings (support) occur. Icons vary but reaction section indicates joint number where bearings occur.

Industry Standards:  
ANSI/TPI 1:

National Design Specification for Metal Plate Connected Wood Truss Construction, DSR-89:  
Design Standard for Bracing,  
Building Component Safety Information, BCSI11:  
Guide to Good Practices for Handling, Installing & Bracing of Metal Plate Connected Wood Trusses.

# Numbering System

**JOINTS ARE GENERALLY NUMBERED/CLOCKWISE AROUND THE TRUSS STARTING AT THE JOINT FAREST TO THE LEFT.**

**CHORDS AND WEBS ARE IDENTIFIED BY END JOINT NUMBERS/LETTERS.**

## PRODUCT CODE APPROVALS

ICC-ES Reports:

- ESR-1311, ESR-1352, ESR-5243, 960-48
- 9730, 95-482, 96-311, 9667A
- NER-487, NER-561
- 9511D, 84-32, 96-67, ER-9507, 9432A

MITek Engineering Reference Sheet: Mill-7473

# General Safety Notes

## Failure to Follow Could Cause Property Damage or Personal Injury

1. Additional stability bracing for truss system, e.g. diagonal or X-bracing, is always required. See BCSI11.
2. Truss bracing must be designed by an engineer. For wide bay spacing, braced lateral bracing themselves may require bracing, or alternative I, L or Eliminator bracing should be considered.
3. Never exceed the design loading shown and never slot members on inadequately braced trusses.
4. Provide copies of the truss design to the building designer, erection supervisor, property owner and all other interested parties.
5. Cut members to bear tightly against each other.
6. Place plates on each face of truss at each joint and embed fully. Knots and weak cleat joint locations are regulated by ANSI/TPI 1.
7. Design assumes trusses will be suitably protected from the environment in accord with ANSI/TPI 1.
8. Unless otherwise noted, moisture content of lumber shall not exceed 17% at time of fabrication.
9. Unless expressly noted, this design is not applicable for use with fire retardant, preservative treated, or green lumber.
10. Consider the appropriate consideration and is the responsibility of truss fabrication. General practice is to consider for dead load deflection.
11. Pile type, size, orientation and location dimensions indicated are minimum piling requirements.
12. Lumber used shall be of the species and size, and if of species, equal to or better than that specified.
13. Top chords must be sheathed or purlin provided at spacing indicated on design.
14. Bottom chords require lateral bracing at 10 ft, spacing, or less, if no ceiling is installed, unless otherwise noted.
15. Corrections not shown are the responsibility of others.
16. Do not call or alter truss member or gable without prior approval of an engineer.
17. Listed and load vertically unless indicated otherwise.
18. Use of green or treated lumber may pose unacceptable environmental, health or performance risks. Consult with project engineer before use.
19. Review all portions of this design (front, back, west and pitched bays) use. Reviewing pictures drawn is not sufficient.
20. Design assumes manufacture in accordance with ANSI/TPI 1 Quality Criteria.
