APPLICATION #: _____

This application to be filled out when applying for a septic system inspection.

County Health Department Application for Improvement Permit and/or Authorization to Construct

IF THE INFORMATION IN THIS APPLICATION IS FALSIFIED, CHANGED, OR THE SITE IS ALTERED, THEN THE IMPROVEMENT PERMIT OR AUTHORIZATION TO CONSTRUCT SHALL BECOME INVALID. The permit is valid for either 60 months or without expiration depending upon documentation submitted. (Complete site plan = 60 months; Complete plat = without expiration)

910-893-7525 option 1

CONFIRMATION # _____

Environmental Health New Septic System Code 800

- **All property irons must be made visible.** Place "pink property flags" on each corner iron of lot. All property lines must be clearly flagged approximately every 50 feet between corners.
- Place "orange house corner flags" at each corner of the proposed structure. Also flag driveways, garages, decks, out buildings, swimming pools, etc. Place flags per site plan developed at/for Central Permitting.
- Place orange Environmental Health card in location that is easily viewed from road to assist in locating property.
- If property is thickly wooded, Environmental Health requires that you clean out the **undergrowth** to allow the soil evaluation to be performed. Inspectors should be able to walk freely around site. **Do not grade property.**
- **All lots to be addressed within 10 business days after confirmation. \$25.00 return trip fee may be incurred for failure to uncover outlet lid, mark house corners and property lines, etc. once lot confirmed ready.**
- After preparing proposed site call the voice permitting system at 910-893-7525 option 1 to schedule and use code 800 (after selecting notification permit if multiple permits exist) for Environmental Health inspection. **Please note confirmation number given at end of recording for proof of request.**
- Use Click2Gov or IVR to verify results. Once approved, proceed to Central Permitting for permits.

Environmental Health Existing Tank Inspections Code 800

- Follow above instructions for placing flags and card on property.
- Prepare for inspection by removing soil over outlet end of tank as diagram indicates, and lift lid straight up (if possible) and then **put lid back in place.** (Unless inspection is for a septic tank in a mobile home park)
- **DO NOT LEAVE LIDS OFF OF SEPTIC TANK**
- After uncovering outlet end call the voice permitting system at 910-893-7525 option 1 & select notification permit if multiple permits, then use code 800 for Environmental Health inspection. **Please note confirmation number given at end of recording for proof of request.**
- Use Click2Gov or IVR to hear results. Once approved, proceed to Central Permitting for remaining permits.

SEPTIC

If applying for authorization to construct please indicate desired system type(s): can be ranked in order of preference, must choose one.

- Accepted Innovative Conventional Any
 Alternative Other _____

The applicant shall notify the local health department upon submittal of this application if any of the following apply to the property in question. If the answer is "yes", applicant **MUST ATTACH SUPPORTING DOCUMENTATION**:

- YES NO Does the site contain any Jurisdictional Wetlands?
 YES NO Do you plan to have an irrigation system now or in the future?
 YES NO Does or will the building contain any drains? Please explain. _____
 YES NO Are there any existing wells, springs, waterlines or Wastewater Systems on this property?
 YES NO Is any wastewater going to be generated on the site other than domestic sewage?
 YES NO Is the site subject to approval by any other Public Agency?
 YES NO Are there any Easements or Right of Ways on this property?
 YES NO Does the site contain any existing water, cable, phone or underground electric lines?

If yes please call No Cuts at 800-632-4949 to locate the lines. This is a free service.

I Have Read This Application And Certify That The Information Provided Herein Is True, Complete And Correct. Authorized County And State Officials Are Granted Right Of Entry To Conduct Necessary Inspections To Determine Compliance With Applicable Laws And Rules.

I Understand That I Am Solely Responsible For The Proper Identification And Labeling Of All Property Lines And Corners And Making The Site Accessible So That A Complete Site Evaluation Can Be Performed.

PO Box 766
Spring Lake, N.C. 28390

Re: Preliminary soil evaluations and septic recommendations, 15 existing lots, Hidden Lakes Subdivision, Harnett County, North Carolina

Dear Mr. Wellons,

A preliminary soils investigation has been completed for each of the above referenced lots at your request. The properties are located in Hidden Lakes Subdivision as shown on the accompanying maps. The purpose of the investigation was to determine the ability of the soil to support any subsurface waste disposal system for each proposed lot. Lots will be served by public water. All ratings and determinations were made in accordance with "Laws and Rules for Sanitary Sewage Collection, Treatment, and Disposal, 15A NCAC 18A .1900".

Each lots 26, 29, 64, 85, 86 & 93 appears to contain at least one area that meets minimum criteria for subsurface waste disposal systems for at least a typical (50' x 60') 4 bedroom home (may include the use of conventional drainlines, gravelless drainlines, fill, pumps, large diameter pipe, French drains, etc.). Soil characteristics in the usable areas were dominantly provisionally suitable to at least 30 inches (conventional) including those specified in rules.1940, .1941, .1942, .1943, .1944 and .1945. A soil map indicating typical soil areas that meet these criteria is enclosed. Each of the lots appears to contain sufficient available space for a repair area for at least a typical 4 bedroom home (may include the use of any of the systems mentioned above and/or pumps, pretreatment, drip irrigation, etc.) These soil areas are dominated by loamy sand, sandy loam and/or sandy clay loam textures (in upper 30 inches) and would typically allow for long term acceptance rates in the 0.4 to 0.8 gpd/sq. ft. (conventional/innovative).

Each of lots 69 and 89 appears to contain at least one area that meets minimum criteria for subsurface waste disposal systems for at least a typical (50' x 60') 3 bedroom home (may include the use of conventional drainlines, gravelless drainlines, pumps, fill, large diameter pipe, French drains, etc.). Soil characteristics in the usable areas were dominantly provisionally suitable to at least 24 inches (conventional) including those specified in rules.1940, .1941, .1942, .1943, .1944 and .1945.

These soil areas are dominated by loamy sand, sandy loam and/or sandy clay loam textures (in upper 30 inches) and would typically allow for long term acceptance rates in the 0.3 to 0.6 gpd/sq. ft. (conventional/innovative).

Each of lots 27 & 28 are unsuitable as currently proposed. These lots might be recovered by a redesign with an adjoining lot (either through recombination or off site easement). A proposed septic/lot design will need to be completed to determine the specifics of the recombination or off site septic. Soil characteristics in the usable areas were dominantly provisionally suitable to at least 30 inches (conventional) including those specified in rules.1940, .1941, .1942, .1943, .1944 and .1945. A soil map indicating typical soil areas that meet these criteria is enclosed. These soil areas are dominated by loamy sand, sandy loam and/or sandy clay loam textures (in upper 36 inches) and would typically allow for long term acceptance rates in the 0.3 to 0.6 gpd/sq. ft. (conventional/innovative).

Each of lots 23 & 25 are unsuitable as currently proposed. These lots should be combined into one lot for one home site. A proposed septic design will need to be completed to determine the specifics of the recombination and house site. Soil characteristics in the usable areas were dominantly provisionally suitable to at least 30 inches (conventional) including those specified in rules.1940, .1941, .1942, .1943, .1944 and .1945. A soil map indicating typical soil areas that meet these criteria is enclosed. These soil areas are dominated by loamy sand, sandy loam and/or sandy clay loam textures (in upper 36 inches) and would typically allow for long term acceptance rates in the 0.3 to 0.6 gpd/sq. ft. (conventional/innovative).

Each lots 66, 83 & 84 are unsuitable for subsurface waste disposal systems due to shallow depths to soil wetness (colors of chroma 2 or less) and/or shallow depths to unsuitable soil morphology. Many of these areas contain wetlands that are unsuitable for development.

Any or all lots may require a specific design/layout on our part prior to action by the local health department due to space and soil considerations (at separate cost to client). Alternative systems (mentioned above) could be required on any lot to compensate for shallow unsuitable soil conditions. Specific house locations, house sizes, driveway locations and/or side entry garages may be required on any individual lot. There should be no grading, logging or other site disturbance in soil areas designated as usable for subsurface waste disposal until approved by the local health department (any site disturbance could remove soil and render the area unusable).

These soil areas are dominated by loamy sand, sandy loam and/or sandy clay loam textures (in upper 30 inches) and would typically allow for long term acceptance rates in the 0.3 to 0.6 gpd/sq. ft. (conventional/innovative).

Each of lots 27 & 28 are unsuitable as currently proposed. These lots might be recovered by a redesign with an adjoining lot (either through recombination or off site easement). A proposed septic/lot design will need to be completed to determine the specifics of the recombination or off site septic. Soil characteristics in the usable areas were dominantly provisionally suitable to at least 30 inches (conventional) including those specified in rules.1940, .1941, .1942, .1943, .1944 and .1945. A soil map indicating typical soil areas that meet these criteria is enclosed. These soil areas are dominated by loamy sand, sandy loam and/or sandy clay loam textures (in upper 36 inches) and would typically allow for long term acceptance rates in the 0.3 to 0.6 gpd/sq. ft. (conventional/innovative).

Each of lots 23 & 25 are unsuitable as currently proposed. These lots could be recovered by combining them. A proposed septic design will need to be completed to determine the specifics of the recombination and house site. Soil characteristics in the usable areas were dominantly provisionally suitable to at least 30 inches (conventional) including those specified in rules.1940, .1941, .1942, .1943, .1944 and .1945. A soil map indicating typical soil areas that meet these criteria is enclosed. These soil areas are dominated by loamy sand, sandy loam and/or sandy clay loam textures (in upper 36 inches) and would typically allow for long term acceptance rates in the 0.3 to 0.6 gpd/sq. ft. (conventional/innovative).

Each lots 66, 83 & 84 are unsuitable for subsurface waste disposal systems due to shallow depths to soil wetness (colors of chroma 2 or less) and/or shallow depths to unsuitable soil morphology. Many of these areas contain wetlands that are unsuitable for development.

Any or all lots may require a specific design/layout on our part prior to action by the local health department due to space and soil considerations (at separate cost to client). Alternative systems (mentioned above) could be required on any lot to compensate for shallow unsuitable soil conditions. Specific house locations, house sizes, driveway locations and/or side entry garages may be required on any individual lot. There should be no grading, logging or other site disturbance in soil areas designated as usable for subsurface waste disposal until approved by the local health department (any site disturbance could remove soil and render the area unusable).

Recommendations contained in this report assume that no foundation drains will be proposed. If any particular lot requires a foundation drain, septic systems other than those specified in the above report may be required (such as pretreatment).

When evaluated, the soil areas designated as usable for subsurface waste disposal were dry. During wetter time periods, subsurface water could be found in any of these soil areas. The local health department has the authority to deny a permit to any soil where water saturates a soil boring. SSEA cannot be certain that this will not occur on any of these lots. If this occurs (and cannot be remedied with a french drain or other drainage), any of these lots could become unsuitable due to .1942 (soil wetness).

As with any property, this report does not guarantee, represent or imply approval or issuance of improvement permit as needed by the client from the local health department (as such, any potential buyers of these properties should obtain appropriate permits from the local health department prior to making and/or completing purchase obligations or financial commitments. Since professional opinions sometimes differ, an actual improvement permit issuance by the local health department is the only guarantee of a site's suitability for a buyers intended use.). This report only addresses rules in force at the time of evaluation. Permits will only be granted if the local health department concurs with the findings of this report. This report only represents my professional opinion as a licensed soil scientist. I trust this is the information you require at this time. If you have any questions, please call.

Sincerely,

Mike Eaker
