Ms Donna-sorry for the delay-I sent a response on the 26th, but it appears to be lost. We have been stuck in Mtns of western NC WITHOUT WATER AND POWER until yesterday and cell service/internet went out last Thurs.

Anyway-the service pole will hold an electrical outlet. We desperately need this power source up at our farm fields, to plug in air compressors, power tools, battery chargers, temporary lights, etc for servicing & repairing our farm tractors & other farm equipments where it actually breaks down, in the fields(which seems to be doing more and more lately).

The service pole is physically is located up at the road(Hwy 210N/25 Cox Pond Lane) where we have 2 agricultural fields(several acres) that we grow some of our crops on. Currently the only available electrical service we have is located at the home sight(185 Cox Pond Lane), about 300-400 yards down the driveway. Getting the equipment there is a hassle in itself. The only way there means driving down a rather steep water diversion dip(that we had to get installed to catch the water for when our pond overflows). Once you traverse the dip, you must cross over the pond dam. If you continue down the driveway, you then reach the house(address is 185 Cox Pond Lane, which is currently our only access to any electrical power supply. So gaining access to power at the pole, beside the field, where we really need it will save us time, money and a lot of work. Loading the tractors/equipment onto a trailer and traversing the driveway has caused a lot of issues(2 examples being it has slowed down production, and it's causing damage to the pond dam itself. This driveway is our only way in and out, and has been expensive to repair. I hope this clears up the confusion. If not, please let me know.

What is this electrical application for? We cannot just issue an electrical permit without a reason.

Sincerely,

**Donna Johnson**
