To Whom It May Concern:

This letter is in regards to my patient, Dennis Ray Stone (DOB 2/17/1960). He has been found to have multiple keratotic like papules on his hands and feet over the past few years. This finding has been associated with chronic low level arsenic poisoning which can seep into ground water. I was hoping he would be able to have his well water tested for this potential contaminant. Please call our office if you have any questions at 910-235-3330.

Thank you,

Natalie Davies, MD
