RE: Site meeting at lot 31, Honeycutt Hills SD, Harnett County, NC.

Dear Mr. James:

Central Carolina Soil Consulting, PLLC met with you and others from DRB Group at lot 31 in Honeycutt Hills SD due to previous effluent surfacing on the lot. Per the Construction Authorization completed by the Harnett County HD, the lot has a daily flow rate of 480 gal/day (4-bedroom) with a horizontal panel block drainfield. The system is pressure dosed with serial distribution (using drop boxes per paperwork provided). No effluent was surfacing on the date of the site meeting (8-19-25), although areas in the front yard showed evidence of previous effluent surfacing.

Central Carolina Soil recommends to install a manifold box with taps (see tap chart) to feed some of the lines individually to better disperse the effluent (with the exception of lines 1-2 (20' & 40') & 3-4 (55' & 70') keep those step-downs). Additionally, the current control panel shall be replaced with an Aquaworx control panel to control the dosing of the system. The flow shall be split between 4 cycles per day (every 4 hours) away from a larger demand dose system. Water records need to be taken on the lot to ensure the system is not being over loaded based on the daily flow rate.

These proposed changes to the wastewater system need to be reviewed and have a permit issued by the Harnett County HD before installation. The recommended changes do not guarantee a fix to wastewater system, rather best professional judgement by CCSC. No soils work was completed on lot 31 on 8-19-25.

If you have any questions regarding the findings on the attached map or in this report, please feel free contact me at anytime. Thank you allowing Central Carolina Soil Consulting to perform this site evaluation for you.

Sincerely,

Jason Hall
