RE: Application for New Septic Tank Improvement Permit

Dear Mr. Escamilla,

A site evaluation was conducted on your lot on June 7, 1994. The site has limitations on the type of system that can be installed. These limitations require that a low pressure pipe system be installed on your lot.

As of July 1, 1992, a contract must be executed between the system's owner and a management entity (a certified waste-water operator) prior to the issuance of an improvement permit. This contract will be for the required maintenance of the system. The contract shall include the specific requirements for maintenance and operation, responsibilities of the owner and the system operator, provisions that the contract shall be in effect for as long as the system is in use and other requirements for the continued proper performance of the system. It shall also be a condition of the Operational Permit that subsequent owners of the system execute such a contract. A copy of the list of Certified Waste Water Operators in Harnett County and the surrounding counties is enclosed for your convenience.

You are also required to submit a design for the low pressure pipe system. This design must come from an engineer, or from someone with a working knowledge of this type of system. This design, along with the above mentioned contract, must be approved by the Environmental Health Section prior to the issuance of the improvement permit.

Sincerely,

Thomas J. Boyce
