

COMMENTS:

JTM. Approached on 9-3-10. By GB. He told me HERT refused to go out and issue repair on job GB and give him. He told me that OT said it was not failing and he would not issue repair. GB told me to go out when Application comes in and issue a repair permit.

I (JTM) asked if I could follow Rules (attached to permit GB). GB told me to do the best job I could on this repair. I went out on 9-8-10. evaluated property (Soil/Boring 5) to see about replacing Lines. Tank was not uncovered. I told Mrs. Royster I needed Tank uncovered & property lines found to finish job. She told me that she could not physically do it. She was going to wait for her husband (Truck Driver) to get back from California before she could do it. But she would do it and call me back 2-3 weeks later. Complaint came in about no permit on Help N THES job - they had they not fixed problem. (I told about what was waiting on, survey & tank) I think it was tenant on Social Service that called.

Garlin was called and he asked about job. I explained the situation he said Tell Mrs. Royster that if she does not find Survey Lines she will be put on pump and haul every 3-5 days at her cost. She finally got Survey on 9-27-10. And called me to tell me, I agreed B & O to go to job if they would - We finished job and came up with 3 to 4 STAGE Remedy to Ground system and it was well that in 36' from Tank. More details may require asking me about situation. ~~9-30-10~~ 9-30-10.

10-16-10 - met Mrs. Royster on site to discuss permit & well abandonment. He took well cap off & I measured static & total depth of well & case ring. Told I could issue permit. ~~10-16-10~~
