Solar Array Post Installation – Structural Review

Per your request, Anthony Bun, a representative of Principal Engineering performed a post install site visit at the above address on 09/24/2021. The purpose of the post installation visit was to confirm the installment of solar panels to the roof were completed as instructed by the Engineer.

Based on examination of the installment of solar panels to the existing roof, it is our conclusion that the photovoltaic array was constructed in accordance with the structural requirements and applicable codes in our original letter dated: 05/19/2021. The framing size and spacing has been verified to match the provided information from our original review. Measures have been taken to waterproof all roof penetrations and no existing or new damage was observed.

If you have any further questions regarding this matter, please call our office at your convenience.
