Solar Array Post Installation – Structural Review

Per your request, Zachary Stone, a representative of Principal Engineering performed a post install site visit at the above address on 05/03/2022. The purpose of the post installation visit was to confirm the installment of solar panels to the roof were completed as instructed by the Engineer.

Based on examination of the installation of solar panels to the existing roof, it is our conclusion that the photovoltaic array was constructed in accordance with the structural requirements and North Carolina applicable codes in the original letter dated: 03/25/2022.

The equipment will not create a negative impact on the building's structural design, including any additional loads imposed (dead, snow, wind) and the installation is in compliance with the North Carolina Residential Code.

Inspection validates construction according to design. The framing size and spacing has been verified to match the provided information from the original review. Measures have been taken to waterproof all roof penetrations and no existing or new damage was observed.

If you have any further questions regarding this matter, please call our office at your convenience.
