Subject: Post Installation Approval Letter

Job Name: Lisa Podsiadly

Address: 205 Gold Ct, Broadway, NC 27505

Attn: To Whom It May Concern

On the above referenced project, the roof structural framing has been reviewed for additional loading due to the installation of the solar PV addition to the roof. There is no negative impact on the buildings structural design, including any additional load imposed (dead, snow or wind). The structural review, including the plans and calculations only apply to the section of roof that is directly supporting the solar PV system and its supporting elements.

EV Engineering has observed the PV installation that was specified for this project. The review was performed to verify that the installation was performed in general conformance with the plans and specifications and that any modifications were acceptable. Calculations were stamped & signed with my professional engineer's seal.

After reviewing the installation, the AS BUILT has been completed in general conformance of the provisions of the approved permits in compliance with the 2018 NCRBC.

Please contact me with any questions or concerns regarding this project.

Sincerely,

Vincent Mwumvaneza, PE
