

12/4/2024

Freedom Forever LLC 43445 Buisiness Park Dr., Suite 110 Temecula, CA 92590

Job Number: 516167 Project Name: Yiwei Jiao

Project Address: 92 Harmony Trl , Broadway, NC

Design Criteria:

Applicable Code = ASCE 7-16

Design Wind Speed = 130 mph (3 Second Gust)

Exposure Category = C

Ground Snow Load = 15 psf Roof Snow Load = 11.55 psf

Module Type = HANWHA QCELL: Q.PEAK DUO BLK ML-G10+ 410

Module Quantity = 12

To whom is may concern,

The above mentioned residential rooftop solar project has been designed to the specifications shown above. The team at Freedom Forever LLC has visited the site to observe the roof and its framing as well as gather other required information for the project. During this observation they did not see any signs of damage or distress to the roof structure which would preclude solar from being installed. Based on that review and the information provided, the calculations on the following pages were completed to determine the adequacy of the roof framing as well as the allowable attachment spacing for the PV panels. The calculations show that the roof can support the proposed PV system without structural modifications.

Mounting Plane	1	2	3	4	5	6	7	8	9	10
Roof Type	Comp Shingle									
Framing Type	Truss									
Framing Size	2x6 @ 24									
Upgrade Size	NA									
Attachment Type	Ecofasten RockIt Smart									
Attachment Type	Slide									
Lag Count	2									
Embedment Depth	2									

Sincerely,

Taqi Khawaja, PE Freedom Forever LLC

Wind Calculations

Pressures based on Section 29.4.4

$$p = q_h(GC_p)(\gamma_E)(\gamma_a)$$

$$q_h = .00256 * K_z * K_{zt} * K_d * V^2$$

 $K_z = 0.98$

K_{zt} = 1.0

K_d = 0.85 ASCE7 Table 26.6-1

 $q_z = 36.1 \text{ psf}$
