

## REPORT

TO: Bennett Hauling

FROM: A. Mueller, TME

PROJECT: Bennett Hauling - 96 Randy Ct

DATE: April 1, 2024

TME has visited the above referenced site, as requested, to evaluate subgrade conditions for proposed diesel tank placement. We understand that area is being evaluated to support a 12,000 gal diesel tank supported on two 40' long skids. Hand augers and test pits advanced in proposed areas indicate soils are suitable for 2,000 PSF. No evidence was observed to indicate possibility of substantial differential settlement between skids.
