Re: Forest Oaks Lot 235  
42 Angel Oak Drive

To whom it my concern:

The porch on the above referenced property was poured on August 29, 2019. Prior to pouring the concrete we back filled the areas with a sand clay material. This material was placed in 8-inch lifts and compacted with a vibratory plate compactor each lift. The subgrade was then termite treated, and the porch slab was poured. This will surely meet code and compaction requirements and is a standard practice with our company. In the past we haven't had to get compaction test on porches on crawl space houses. But moving forward we will meet these requirements.

Sincerely Yours,

Shaun Harrell  
President  
Carolina Concrete Finishing, Inc.
