Product is Sufficient for Application and Loads Described

Building Code: IBC 2012 Design Methodology: ASD Member Cut Length: 17' 9 1/4" Member Drawing Not to Scale

Design Results:	Design @ Location	Allowed	Result	LDF	Load Combination - (Load Group)
Critical Reaction	2624 lb @ 17' 8"	7219 lb (2.75")	Passed - 36%	-	1.0 D + 1.0 S - (0)
Shear	2161 lb @ 1' 7 1/2"	12236 lb	Passed - 18%	1.15	1.0 D + 1.0 S - (0)
Moment	11344 lb-ft @ 8' 11"	35781 lb-ft	Passed - 32%	1.15	1.0 D + 1.0 S - (0)
Live Load Deflection	0.15" @ 8' 11"	0.58" L/360	Passed - L/999	-	1.0 D + 1.0 S - (0)
Total Load Deflection	0.29" @ 8' 11"	0.88" L/240	Passed - L/737	-	1.0 D + 1.0 S - (0)

Design Notes:

- * Top Edge Bracing (Lu): Top compression edge must be braced at 17-01-00 o/c based on loads applied, unless detailed otherwise.
- * Bottom Edge Bracing (Lu): Bottom compression edge must be braced at 17-09-00 o/c based on loads applied, unless detailed otherwise.

Supports:

Support	Start : End	Req'd Br'g	Source	Maximum Loads to Supports			
				Dead	Floor Live	Roof Live	Snow
1	0" : 3 1/2"	1.5"	PBO42(i1779)	1208 lb	-	-	1427 lb
2	17' 6 1/2" : 17' 9 1/4"	1.5"	PBO43(i1780)	1199 lb	-	-	1417 lb

Loads:

Type	Start : End	Combine	Source	Maximum Loads on Member			
				Dead	Floor Live	Roof Live	Snow
Self Weight	0" : 17' 9 1/4"	-	Self Weight	15 lb/ft	-	-	-
Uniform	0" : 17' 9 1/4"	-	User Load	120 lb/ft	-	-	160 lb/ft

Errors, Warnings, & Notes:

- * If sloping roof loads are applied to this member, the roof dead load has been adjusted for slope.
- * The member graphic, dimensions, and locations shown on this report are based on the centerline of the member.
- * Analysis and Design has been performed using precision loading from actual modeled conditions. Some loads may have been modified to simplify reporting.
- * Load Duration Factors: Dead - 0.90, Floor Live - 1.00, Roof Live - 1.25, Snow - 1.15

Design Notes:

* Uplift constraint has been released at support location 4-12.

* Top Edge Bracing (Lu): Top compression edge must be braced at 32-02-00 o/c based on loads applied, unless detailed otherwise.

* Bottom Edge Bracing (Lu): Bottom compression edge must be braced at 23-03-00 o/c based on loads applied, unless detailed otherwise.

2 piece(s) of 1 3/4" x 11 7/8" 2.0E Microllam® LVL

Member Type: Beam | Level: 1st Floor

Product is Sufficient for Application and Loads Described

Errors, Warnings, & Notes:

- * If sloping roof loads are applied to this member, the roof dead load has been adjusted for slope.
- * The member graphic, dimensions, and locations shown on this report are based on the centerline of the member.
- * Analysis and Design has been performed using precision loading from actual modeled conditions. Some loads may have been modified to simplify reporting.
- * Load Duration Factors: Dead - 0.90, Floor Live - 1.00, Roof Live - 1.25, Snow - 1.15

Weyerhaeuser warrants that the sizing of its products will be in accordance with Weyerhaeuser product design criteria and published design values. Weyerhaeuser expressly disclaims any other warranties related to the software. Refer to current literature for installation details and trademark information available at wy.com/woodproducts. Use of this software is not intended to circumvent the need for a design professional as determined by the authority having jurisdiction. The designer of record, builder or framer is responsible to assure that this calculation is compatible with the overall project. The product application, input design loads, dimensions and support information have been provided by _____ of _____.

- GENERAL NOTES:**
- Joists may be shifted up to 3" from on center spacing to avoid rafter interference, flush beams and/or plumbing drops. **DO NOT CUT JOIST FLANGES.**
 - All EWP beams have been designed assuming full width support of the members/plies, unless noted otherwise.
 - This drawing may contain deviations from the original project documents. It is the responsibility of the contractor to notify the project Design Professional of these deviations to verify conformance with the original design intent of the project.
 - This layout is intended for the use of TrueJoist engineered wood products only. The substitution of other wood products with this layout is NOT PERMITTED. Please identify the TJI, TimberStrand® LSL, Microlam® LVL and Parallam® PSL stamps on the product to ensure that this layout is valid for the products actually installed.
 - Only header openings and roof loads which affect Weyerhaeuser product sizes have been denoted on this layout. In addition to and 'CS' detail callouts shown, solid blocking and/or squash blocks are required to provide vertical load transfer from all concentrated load locations to foundation below. See Pocket Framers Guide for appropriate detail(s).

230 & 360	2x4	24"	24"
414 & 433	2x4	24"	24"
560 & 647	2x4	24"	24"

WARNING
 Joists are unstable until braced laterally.
 Lack of proper bracing during construction can result in serious accidents. Observe the following guidelines:
 1. Properly install all blocking, hangers, joists, and joists at 12" joist and supports.
 2. Establish a permanent bracing system. Members to be braced are those to be braced and will.
 3. Safety bracing of all members must be installed in a braced area or braced area and not over.
 4. Bracing must be installed within 12" of the top and bottom flanges.
 5. All bracing must be installed within 12" of the top and bottom flanges.
 6. The bracing must extend through the full length of the joist.
 7. The bracing must be installed within 12" of the top and bottom flanges.
 8. The bracing must be installed within 12" of the top and bottom flanges.
 9. The bracing must be installed within 12" of the top and bottom flanges.
 10. The bracing must be installed within 12" of the top and bottom flanges.
 11. The bracing must be installed within 12" of the top and bottom flanges.
 12. The bracing must be installed within 12" of the top and bottom flanges.

GENERAL NOTES:

- Joists may be shifted up to 3' from on center spacing to avoid hanger interference, flush beams and/or plumbing drops. **DO NOT CUT JOIST FLANGES.**
- All EWP beams have been designed assuming full width support of the members/piles, unless noted otherwise.
- This drawing may contain deviations from the original project documents. It is the responsibility of the contractor to notify the project Design Professional of these deviations to verify conformance with the original design intent of the project.
- This layout is intended for the use of TrusJoist engineered wood products only. The substitution of other wood products with this layout is NOT PERMITTED. Please identify the TJI, TimberStrand® LSL, Microlam® LVL and Parallam® PSL stamps on the product to ensure that this layout is valid for the products actually installed.
- Only header openings and roof loads which affect Weyerhaeuser product sizes have been denoted on this layout. In addition to and 'CS' detail callouts shown, solid blocking and/or squash blocks are required to provide vertical load transfer from all concentrated load locations to foundation below. See Pocket Framers Guide for appropriate detail(s).

© COPYRIGHT 2011 GARRELL ASSOCIATES INC.
WARNING FEDERAL COPYRIGHT LAWS RESTRICTS THE REMOVAL OF THIS NOTE:

WARNING

Joists are unstable until braced laterally.

Bracing includes:

- Plywood
- Sheathing
- Stud Line
- Stringer
- Diaphragm
- Shear Wall

DO NOT walk on joists until braced. INJURY MAY RESULT.

DO NOT walk on joists that are lying flat.

DO NOT stack building materials on unbraced joists. Stack only over beams or walls.

WARNING NOTES:

Lack of proper bracing during construction can result in serious accidents. Observe the following guidelines:

WARNING: JOISTS ARE UNSTABLE UNTIL BRACED LATERALLY.

BRACING INCLUDES: Sheathing, Stringer, Ply Shear, Sheathing, Shear Wall, Stud Line.

Lack of proper bracing during construction can result in serious accidents. Observe the following guidelines:

1. Always install all bracing, stringer, sheathing, and stud line 12" from end supports.
2. Establish a permanent deck, sheathing, sheathing, sheathing the first 4 feet of joist at the end of the bay or braced end wall.
3. Safety bracing of all temporary walls to support a floor or roof structure must be installed.
4. Sheathing must be completely attached to each 12" joist before additional bracing can be placed on the system.
5. Size of lumber must ensure safety bracing on both the top and bottom flanges.
6. The stringer must remain at least 12" from top alignment.
