Summary of Services Performed (field test data, locations, elevations & depths are estimates) & Individuals Contacted.

The ECS representative arrived on site as requested to check the bearing capacity of soils via hand auger/DCP method for for stem wall backfill.

A hand auger was used to advance to the boreholes to different depths noted on the boring logs dynamic cone penetrometer DCP test were performed in the hand auger boreholes by a 1.5 inch diameter cone driven into the soil by a 15 pound ring weight with a free fall of 20 inches the number of blows required to drive the cone into the soil a distance of 1.75 inches is termed the DCP value and is indicated for each test on the hand auger.

A total of 2 hand auger/DCP evaluations were performed to a depth of approximately 3 feet below the current footing sub grade elevation. Test results indicated that the materials in place at the location and elevations tested did appear to be suitable to support the design slab on grade.

Contractor was notified of test results prior to departure from jobsite.

ECS will return as requested for additional services.
