# JOIST DETAILS

**A2 | A2W** Must have 1 3/4" minimum joist bearing at ends. Attach rim joist per A3 detail.

**A3 | A3W** For rim board thicker than 1 3/4" - Attach Joist to rim board with one 10d (0.128"x3") nail. Top nail from joist into rim board. - Connect corner with four 10d (0.128"x3") nails. Toe nail from side of parallel closure into rim board

**B3 | B3W** Blocking panels may be required with shear walls above or below (See detail B1)

**B4 | B4W** End of joists at centerline of support

**CS** Use 2x4 minimum squash blocks to transfer load around joist

**B1 | B1W** Blocking panels may be required with shear walls above or below - see detail B1

**H1** Web stiffeners required if sides of hanger do not laterally support at least 3/8" of joist top flange

## FASTENING of FLOOR PANELS

Guidelines for Closest On-Center Spacing per Row

Nail Size	I-JOIST *		Rim Board	1 1/2" LSL or wider	LVL	PSL
	110, 210, and 230 EQ.	360 and 560 EQ.	1 1/4" LSL

10d (0.148" x 3")	4"	4"	4"	4"	4"	4"
16d (0.162" x 3 1/2")	6"	6"	6" (2)	6" (2)	8"	6"

- (1) One row of fasteners permitted (two at abutting panel edges) for diaphragms. Stagger nails when using 4" on-center spacing and maintain 3/8" joist and panel edge distance. For other applications, multiple rows of fasteners are permitted if the rows are offset at least 1/2" and staggered.
- (2) Can be reduced to 4" on-center if nail penetration into the narrow edge is no more than 1 3/8" (to avoid splitting).
- Recommended nailing is 12" on-center in field and 6" on-center along panel edge. Fastening requirements on engineered drawings supersede recommendations listed above.

- Recommended use of a non-polyurethane subfloor adhesive on all contact points between panels and floor framing.
- Nailing rows must be offset at least 1/2" and staggered.
- 14 ga. staples may be substituted for 8d (0.113" x 2 1/2") nails if minimum penetration of 1" into the joist or rim board is achieved.
- Maximum spacing of nails is 18" on-center for joists.

DO NOT bevel cut joist beyond inside face of wall.

Joists must be laterally supported at cantilever and end bearings by blocking panels, hangers, or direct attachment to a rim board or rim joist.

DO NOT overhang seat cuts on beams beyond the inside face of support member.

Braced end wall - see note 3 under WARNING

DO NOT use sawn lumber for rim board or blocking, as it may shrink after installation. Use only engineered lumber.

Protect untreated wood from direct contact with concrete

1 1/2" knockouts at approximately 12" on-center

Bearing plate to be flush with inside face of wall or beam

# BEAM and COLUMN DETAILS

**B2 | B2W** Blocking panels may be required with shear walls above or below - see detail B1

(1) If necessary, increase filler and backer block height for face mount hangers and maintain 1/8" gap at top of joist; see detail W. Filler and backer block lengths should accommodate required nailing without splitting (12" minimum for backer blocks and 24" minimum for filler blocks).

# INSTALLATION TIPS

- Subfloor adhesive will improve floor performance, but may not be required.
- Squash blocks and blocking panels carry stacked vertical loads (details B1 and B2). Packing out the web of a joist (with web stiffeners) is not a substitute for squash blocks or blocking panels.
- When joists are doubled at non-load bearing parallel partitions, space joists apart the width of the wall for plumbing or HVAC.
- Additional joist at plumbing drop (see detail).
