- As allowed in Section N1101.4, thermal performance of a component may be adjusted provided that overall heat loss does not exceed the total resulting from conformance to the required U-values standards. Calculations to document equivalent heat loss shall be performed using the procedure and approved U-values contained in Table N1101.1(1).
- R-values used in this table are nominal, for the insulation only in standard wood framed construction and not for the entire assembly.
- Wall insulation requirements apply to all exterior wood framed, concrete or masonry walls that are above grade. This includes cripple walls and rim joist areas. Nominal compliance with R-21 insulation and Intermediate Framing (N1101.4.5) with insulated grade wood, concrete or masonry walls include all walls that are below grade and do not include those portions of such walls that extend more than 24 inches above grade. R-21 for insulation in framed cavity. R-15 continuous insulation.
- Insulation levels for ceilings that have limited attic/rafter depth such as dormers, bay windows or similar features totaling not more than 150 square feet in area may be reduced to not less than R-21 when reduced, the cavity shall be filled (except for required vent spaces) R-49 insulation installed to minimum 6-inches depth at top plate exterior of structure to achieve U-factor
- Vaulted ceiling surface area exceeding 50 percent of the total heated space floor area shall have a U-factor no greater than U-0.226 (equivalent to R-38 rafter or scissor truss with R-38 advanced framing)

n. A = Advanced frame construction. See section N1101.4.6

- Heated slab interior applies to concrete slab floors (both on and below grade) that incorporate a radiant heating system within the slab. Insulation shall be installed underneath the entire slab.

- Sliding glass doors shall comply with window performance requirements.

- Reduced area may not be used as a trade off criterion for thermal performance of any component.
- Skylights installed at 2 percent or less of total heated floor area shall be deemed to satisfy this requirement with vinyl, wood or thermally broken aluminum frames and double-pane glazing with low-emissivity coatings. Skylight U-factor is tested in the 20 degree overhead plane in accordance with NFRC standards.
