OCTOBER 3, 2021

Ref: HAVEN Lot 42, HARNETT COUNTY

Dear Sir,

A soil evaluation was conducted on the above referenced tract to determine the sites suitability for septic. The current laws and rules of NC was used as guide for this evaluation.

Hand Auger borings on the site were used to characterize the soil texture, and depth to the soil wetness condition. The attached plot plan shows the location of the septic system in the most ideal location on the site. The soil wetness condition was found to be 30-36" from the surface with a sandy clay loam texture. I have assigned an LTAR of 0.4 gpd/sqft for a 480 gpd 4 bedroom residence. This will require the installation of 5-60' 25% reduction lines that shall be installed in accordance with the current rules. The depth to soil wetness of 30-36" would constitute an 18-20" trench bottom. The system will require 6" soil cover that shall extend 5' from the edge of the system. The system will require a 1000 gallon septic tank.

The repair area will require a 45'x60' 25% reduction installed at a depth of 18-20" from the surface (LTAR 0.4).

After installation the site should be landscaped to shed surface water. Any alterations to the site may impact soil conditions.

If you have any questions please feel free to contact me at 910-330-2784. Thank You.

Sincerely,
