= 2nd Level Wall

S IS A TRUSS PLACEMENT DIAGRAM ONLY. so is a redesigned as individual building components to be incorporated into building design at the specification of the building designer. See individual design ts for each truss design identified on the placement drawing. The building designer sponsible for temporary and permanent bracing of the roof and floor system and for overall structure. The design of the truss support structure including headers, beams, s, and columns is the responsibility of the building designer. For general guidance rding bracing, consult BCSI-B1 and BCSI-B3 provided with the truss delivery package liline @ sbcindustry.com

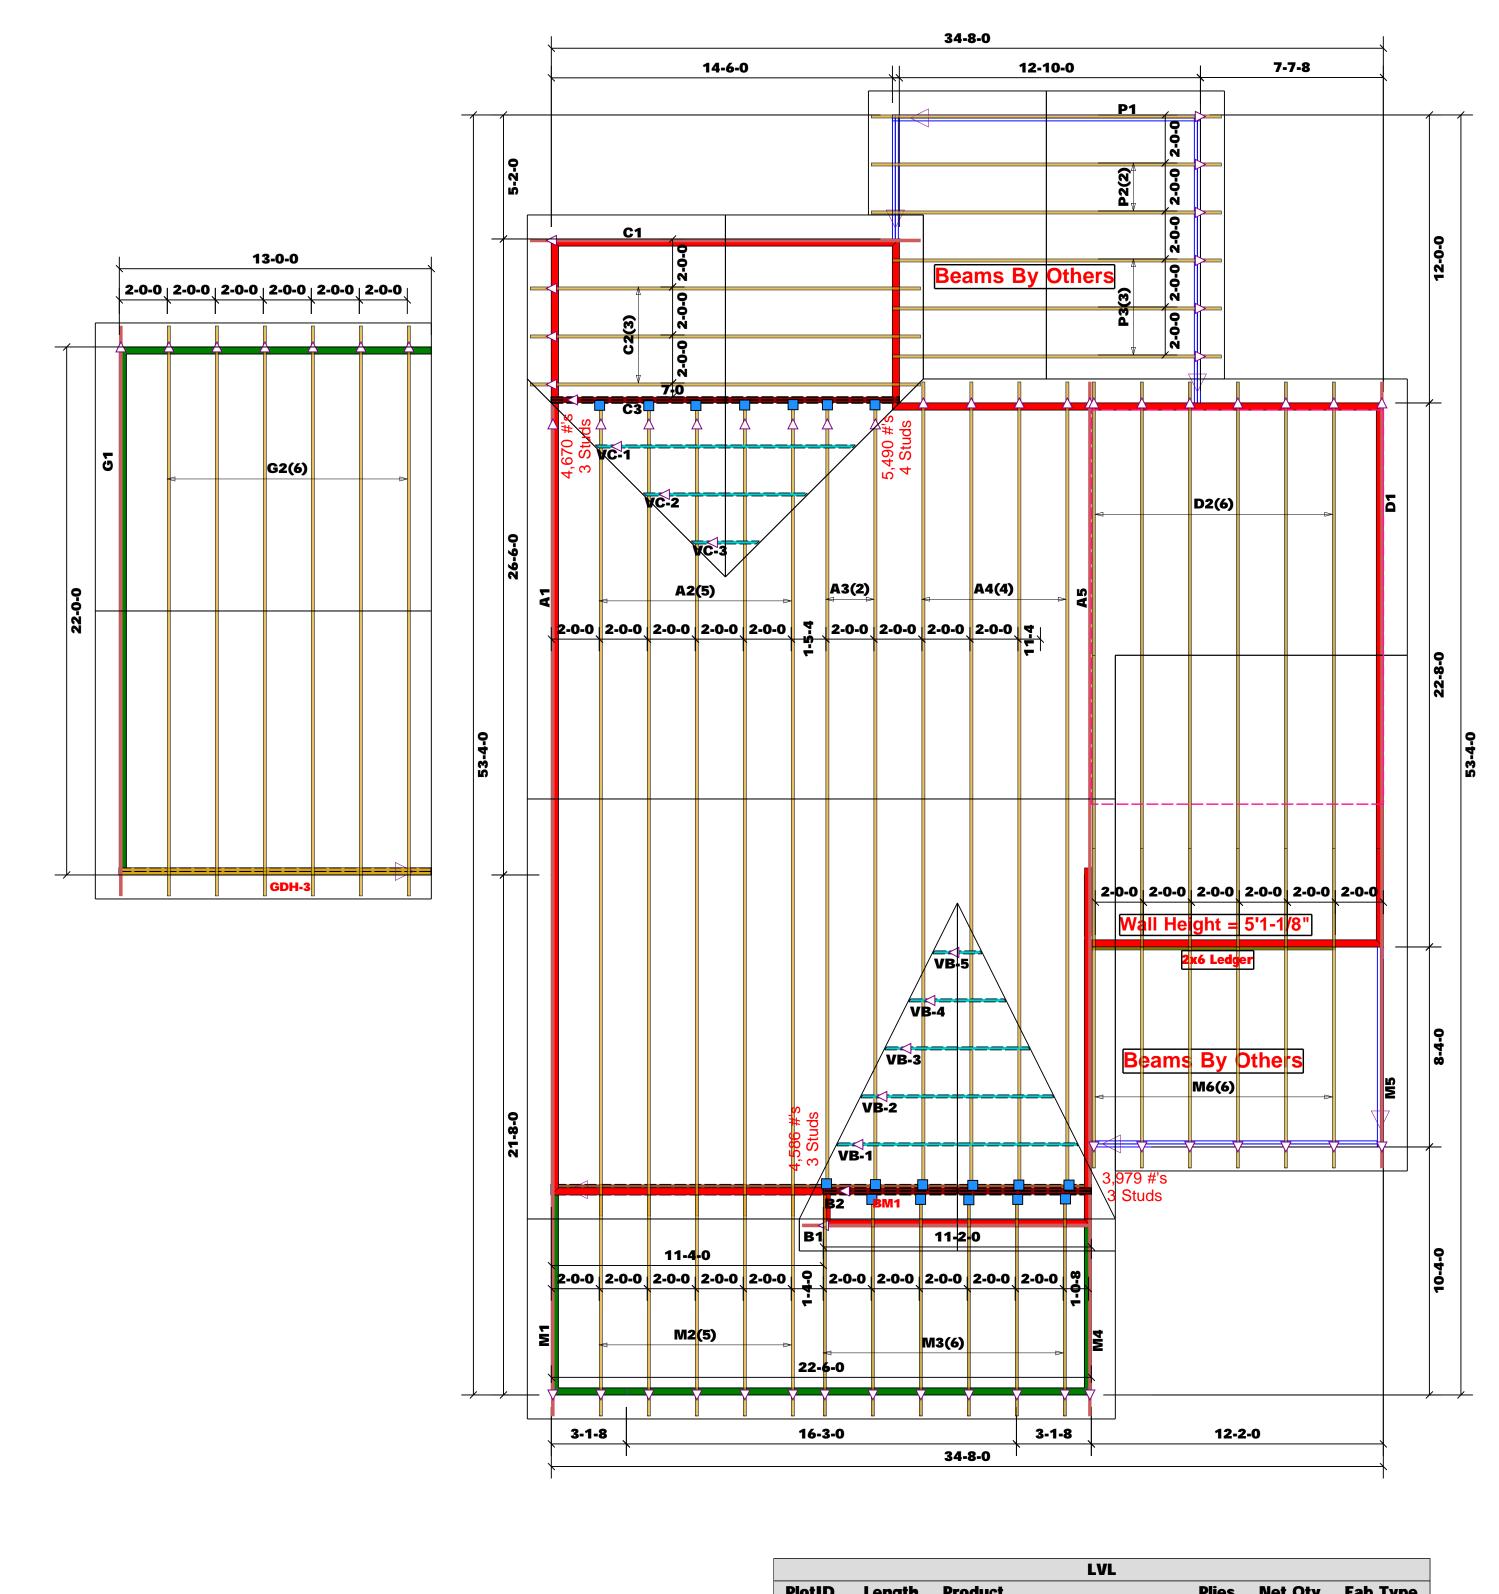

Reaction / # of Studs

ring reactions less than or equal to 3000# are deemed to comply with the ciriptive Code requirements. The contractor shall refer to the attached Tables rived from the prescriptive Code requirements) to determine the minimum idation size and number of wood studs required to support reactions greater 3 3000# but not greater than 15000#. A registered design professional shall etained to design the support system for any reaction that exceeds those cified in the attached Tables. A registered design professional shall be inted to design the support system for all reactions that exceed 15000#.
