ese trusses are designed as individual building components to be incorporated into building design at the specification of the building designer. See individual design ets for each truss design identified on the placement drawing. The building designer esponsible for temporary and permanent bracing of the roof and floor system and for overall structure. The design of the truss support structure including headers, beams, is, and columns is the responsibility of the building designer. For general guidance arding bracing, consult BCSI-B1 and BCSI-B3 provided with the truss delivery package online @ sbcindustry.com

tearing reactions less than or equal to 3000# are deemed to comply with the rescriptive Code requirements. The contractor shall refer to the attached Tables derived from the prescriptive Code requirements) to determine the minimum bundation size and number of wood studs required to support reactions greater han 3000# but not greater than 15000#. A registered design professional shall be retained to design the support system for any reaction that exceeds those pecified in the attached Tables. A registered design professional shall be etained to design the support system for all reactions that exceed 15000#.
