General Structural Notes Α.

- Based on information furnished to Deltec, this structure is designed to the above minimum loads. The customer understands it is his responsibility to verify this information is correct for his building project. They agree not to hold Deltec Homes inc. or any of their employees responsible if it is later determined this information is not applicable for their project. Further, they understand that any correction to this information must be made before they enter into their production contract to avoid any redesign or re-engineering charges.
- 3. The information contained in the structural drawings applies only to the structural design elements associated with the Deltec Homes, inc. furnished components. This includes the primary structural elements responsible for resisting the lateral and gravity loads as specified by the governing model building code. 4. The general contractor must confirm that existing conditions are compatible with assumptions stated in the production of this design document. Deltec Homes, inc. must be contacted immediately in the event of any
- discrepancies. 5. The general contractor is solely responsible for the installation and erection of temporary shoring and/or bracing during the construction process.
- The mechanical, electrical, and plumbing contractors shall coordinate required wall openings with the general 6. contractor.
- 7. All roof or floor penetrations shall be coordinated with the general contractor. Additional framing shall be furnished and installed by the general contractor. Deltec Homes, inc. is not responsible for inspection or quality control of the erected structure beyond the 8.
- factory manufactured components. 9. Any questions or comments relating to this document must be forwarded to Deltec Homes, inc
- B. <u>Geo-Technical and Foundation Notes</u> The foundation for this structure is to be designed by other qualified professionals.
- C. Factory Built Wall Panels
- All wall studs are SPF no. 2 or better. R-5 thermal shield (optional): 1" XPS foam pre-applied to wall panels unless prohibited by local codes (shipped loose as required, see plans).
- Airblock (optional): self-expanding foam gasket installed at perimeter of all factory-installed plywood 3. sheathing.
- Headers are double 2x SYP no. 1 or better.
- Bottom plates are P.T. SYP for slab-on-grades construction, SPF no. 2 or better for all other foundations (unless noted otherwise). Fasteners are 0.131"x 3.25" H.D.G. framing nails and 0.131"x2.5" H.D.G. sheathing nails.
- Standard wall panels are sheathed with 5/8" CDX plywood unless otherwise specified. Interior load-bearing walls are not sheathed. Standard nailing pattern is 8d nails @ 3" O.C. @ edges, 6" O.C. @ field (unless otherwise specified). Nails 8.
- shall not be placed closer than 3/8" to panel edges. Typar DW house wrap is used for weather resistant barrier on all standard panels unless noted otherwise. 9.
- Siding is shipped loose to be installed on site by others. 10. 11. Windows installed in production will be trimmed out for homes that have siding package. When only CDX sheathing for walls is specified, or only rough openings for windows designated (with siding option), window trim is not a standard component. This trim may be purchased as an option. Extension jambs are not included, unless otherwise specified.

D. Floor System (If required)

- Trusses shall be temporarily braced as required during construction to prevent collapse. The builder is responsible for the design and installation of this bracing. Information regarding temporary truss bracing can be obtained from the "Wood Truss Council Of America Bcsi-B1 Guide For Handling, Installing, Restraining, And Bracing Of Wood Trusses".
- Truss members shall be permanently braced with "t-braces", continuous linear braces, and diagonals as 2. indicated on the sealed truss designs and truss layout drawings, or as required by the "Wood Truss Council Of America Bcsi-B1 Guide For Handling, Installing, Restraining, And Bracing Of Trusses".
- Pre-manufactured wood truss top chords shall be fully sheathed and bottom chords shall have rigid ceilings or 3. lateral bracing applied, unless otherwise indicated by the sealed truss designs.
- See "Floor Framing" layout page for special conditions.
- Trusses designed as required by site specific loading conditions. 3/4" Advantech sheathing underlayment provided by Deltec supported by web-tec open web floor trusses at 24" O.C. maximum.
- Trusses are SYP no. 1 or better.
- Simpson ties used for attachment of floor trusses to sill plates or girders.
- Ε. Roof System Trusses shall be temporarily braced as required during construction to prevent collapse. The builder is responsible for the design and installation of this bracing. Information regarding temporary truss bracing can be obtained from the "Wood Truss Council Of America Bcsi-B1 Guide For Handling, Installing, Restraining, And Bracing Of Wood Trusses".
- 2. Truss members shall be permanently braced with "t-braces", continuous linear braces, and diagonals as indicated on the sealed truss designs and truss layout drawings, or as required by the "Wood Truss Council Of America Bcsi-B1 Guide For Handling, Installing, Restraining, And Bracing Of Trusses". Pre-manufactured wood truss top chords shall be fully sheathed and bottom chords shall have rigid ceilings or 3.
- lateral bracing applied, unless otherwise indicated by the sealed truss designs. Trusses designed as required by site specific loading conditions.
- See "Roof Framing" layout page for special conditions.
- 5/8" CDX plywood sheathing, provided by Deltec.
- Trusses are SYP no. 1 or better.
- Trusses spaced at 24" O.C. maximum. Simpson ties used for attachment to wall panels.
- Roofing underlayment and button cap nails provided by Deltec (unless classic metal roof option selected. 10. Underlayment is included in classic metal roof package.)
- F Assembly Hardware
- See plans & general details for required hardware.
- Nails for Advantech floor and CDX roof sheathing and general framing purposes are not included as part of the standard package due to wide regional variations in installation technique. Deltec recommends 0.131" x 2.5" (8d) ring shank nails for sheathing and 0.131" x 3.25" (16d) nails for general framing. Hot dipped galvanized fasteners are required for exterior deck applications or any application in contact with preservative treated lumber. Loose nails may be purchased from Deltec as an option.
