Bearing reactions less than or equal to 3000# are deemed to comply with the prescriptive Code requirements. The contractor shall refer to the attached Tables (derived from the prescriptive Code requirements) to determine the minimum foundation size and number of wood studs required to support reactions greater than 3000# but not greater than 15000#. A registered design professional shall be retained to design the support system for any reaction that exceeds those specified in the attached Tables. A registered design professional shall be retained to design the support system for all reactions that exceed 15000#.

THIS IS A TRUSS PLACEMENT DIAGRAM ONLY. These trusses are designed as individual buildin components to be incorporated into the building design at the specification of the building design See individual design sheets for each truss desi identified on the placement drawing. The buildin designer is responsible for temporary and permanent bracing of the roof and floor system for the overall structure. The design of the truss support structure including headers, beams, wal and columns is the responsibility of the building										

Ind of Truss
Ind of Truss
Ind of Truss
Ind columns is the responsibility of the building designer. For general guidance regarding bracing, consult BCSI-B1 and BCSI-B3 provided with the truss delivery package or online @ sbcindustry.com
