THIS IS A TRUSS/COMPONENT PLACEMENT DIAGRAM (TPD) ONLY; NOT AN ENGINEERED DOCUMENT. Trusses are designed as individual building components to be incorporated into the building design at the specification of the building designer is responsible for temporary and permanent bracing of the roof and floor system and for the overall structure. The design of the support structure including but not limited to headers, beams, walls, and columns is also the responsibility of the building designer. For general guidance regarding installation and bracing, consult "Building Component Safety Information" (BCSI) available from the SBC Association (www.sbcacomponents.com). It is the responsibility of the General Contractor to verify that the provided component layout matches the final intended construction plans, loading conditions, and use. If they do not, it is the responsibility of the Persponsibility of the plans containing the latest specifications and designs. JPP will not be responsible for plan changes by others after final approval of shop plans containing the latest specifications and designs on the drop plan changes by others after final approval of shop plans containing the latest specifications and designs. JPP will not be responsible for plan changes by others after final approval of shop proval of shop plans containing the latest specifications.
