Re. 5131 NC 55 East Erwin, NC 28339
To, Harnett County Inspection Dept.

I, Estanislao Villegas, of Quality Spray Foams Insulation, attest that the above new construction deck has been sprayed with AGRIBALANCE spray foam insulation. The foam has been installed at 7 inches in between rafters. (R-30 uncompressed above top plate), and 3.5 inches at gable ends (R-15) to prescriptive code guidelines.

All foam insulation will be separated from the interior of the building with drywall as required, or is allowed to be left exposed in areas where access is for service of utility, as per ESR-2600 and ESR-3824, and no additional coatings are required over foam.

Quality Spray Foams Insulation is an approved contractor for DEMILEC, and Estanislao Villegas has attended the mandatory training program required for this certification.

AGRIBALANCE is an air impermeable insulation and can be applied directly to the back of the roof deck to create an unvented attic assembly as per code.

Thank You,

Estanislao Villegas
