

Nordic I-Joists with a Side Top Flange Notch

This technical note provides guidance to builders in case of damage caused to Nordic I-joists.

This technical note only applies if the following assumptions are met:

1. Maximum of one notch per I-joist.
2. Notch on the side of the top flange.
3. Notch depth up to 1 inch.
4. Notch length up to 4 inches.
5. For multiple spans, the end spans are 40% or more of the adjacent span and the notch is located between the mid-span and the end (see the drawing at the bottom left).
6. Uniformly distributed loads.

For all other cases, here are the options:

- a. Replace the damaged joist;
- b. Add a new joist within three inches of the notched joist;
 - Verify sheathing span limits for the increased spacing.
 - Verify simple span joist capacity.
- c. Contact Nordic Technical Support.

The following tables provide the allowable spans for Nordic I-joists with a side top flange notch, for simple and multiple spans, notch depths of 1/2 and 1 inch, with and without repair. The drawings below illustrate the notch location from nearest support, x , as well as its depth and length.

Elevation view of a simple-span joist and notch location

Section view of a side top flange notch

Elevation view of a multiple-span joist and notch location

Top view of a side top flange notch

Repair Option for Nordic I-Joists with a Side Top Flange Notch

The following options are applicable to Nordic I-joists with a side top flange notch, only if the assumptions described on page 1 are met. In the following tables, the "No repair" columns indicate the allowable spans requiring no repair, while the "Repair" columns indicate the allowable spans when a repair is required.

Repair detail:

1. Install a 2x4 S-P-F No. 2 or better reinforcement, at least 6 feet long, on either side of the top flange.
2. The reinforcement must be centered on the notch, or installed from the support if the notch is at a distance of 3 feet or less from the support.
3. Attach the reinforcement with 8d common nails at 3 inches o.c., as shown.

Elevation view of a repaired I-joist

Design Criteria

Notch depth:	1/2 inch
Span:	Simple span
Loads:	Live load = 40 psf and dead load = 10 psf
Deflection limit:	L/240 under total load
Sheathing:	APA Rated nailed-glued sheathing

Allowable Floor Spans

Live load deflection limit of L/480

Joist depth	Joist series	Notch location (x) ≤ 4 ft								Notch location (x) ≤ 8 ft

Notes:

- The tabulated clear spans are applicable to residential floor construction meeting the above design criteria and are based on a sheathing thickness of 19/32 inch (40/20 or 20 oc) for a joist spacing of 19.2 inches or less and on a sheathing thickness of 23/32 inch (48/24 or 24 oc) for a joist spacing of 24 inches.
- Minimum bearing length shall be 1-3/4 inch for end bearings and 3-1/2 inches for intermediate bearings.
- Bearing stiffeners are not required when I-joists are used in accordance with these tables, except as required for hangers.
- See page 1 for design assumptions. Repair shall be designed according to detail on page 2.

Notes:

- The tabulated clear spans are applicable to residential floor construction meeting the above design criteria and are based on a sheathing thickness of 19/32 inch (40/20 or 20 oc) for a joist spacing of 19.2 inches or less and on a sheathing thickness of 23/32 inch (48/24 or 24 oc) for a joist spacing of 24 inches.
- Minimum bearing length shall be 1-3/4 inch for end bearings and 3-1/2 inches for intermediate bearings.
- Bearing stiffeners are not required when I-joists are used in accordance with these tables, except as required for hangers.
- See page 1 for design assumptions. Repair shall be designed according to detail on page 2.

Design Criteria

Notch depth:	1/2 inch
Span:	Simple span
Loads:	Live load = 40 psf and dead load = 15 psf
Deflection limit:	L/240 under total load
Sheathing:	APA Rated nailed-glued sheathing

Allowable Floor Spans

Live load deflection limit of L/480

Notes:

- The tabulated clear spans are applicable to residential floor construction meeting the above design criteria and are based on a sheathing thickness of 19/32 inch (40/20 or 20 oc) for a joist spacing of 19.2 inches or less and on a sheathing thickness of 23/32 inch (48/24 or 24 oc) for a joist spacing of 24 inches.
- Minimum bearing length shall be 1-3/4 inch for end bearings and 3-1/2 inches for intermediate bearings.
- Bearing stiffeners are not required when I-joists are used in accordance with these tables, except as required for hangers.
- See page 1 for design assumptions. Repair shall be designed according to detail on page 2.

Design Criteria

Notch depth:	1/2 inch
Span:	Multiple spans
Loads:	Live load = 40 psf and dead load = 15 psf
Deflection limit:	L/240 under total load
Sheathing:	APA Rated nailed-glued sheathing

Allowable Floor Spans

Live load deflection limit of L/480

Notes:

- The tabulated clear spans are applicable to residential floor construction meeting the above design criteria and are based on a sheathing thickness of 19/32 inch (40/20 or 20 oc) for a joist spacing of 19.2 inches or less and on a sheathing thickness of 23/32 inch (48/24 or 24 oc) for a joist spacing of 24 inches.
- Minimum bearing length shall be 1-3/4 inch for end bearings and 3-1/2 inches for intermediate bearings.
- Bearing stiffeners are not required when I-joists are used in accordance with these tables, except as required for hangers.
- See page 1 for design assumptions. Repair shall be designed according to detail on page 2.

Design Criteria

Notch depth:	1 inch
Span:	Multiple spans
Loads:	Live load = 40 psf and dead load = 10 psf
Deflection limit:	L/240 under total load
Sheathing:	APA Rated nailed-glued sheathing

Allowable Floor Spans

Live load deflection limit of L/480

Notes:

- The tabulated clear spans are applicable to residential floor construction meeting the above design criteria and are based on a sheathing thickness of 19/32 inch (40/20 or 20 oc) for a joist spacing of 19.2 inches or less and on a sheathing thickness of 23/32 inch (48/24 or 24 oc) for a joist spacing of 24 inches.
- Minimum bearing length shall be 1-3/4 inch for end bearings and 3-1/2 inches for intermediate bearings.
- Bearing stiffeners are not required when I-joists are used in accordance with these tables, except as required for hangers.
- See page 1 for design assumptions. Repair shall be designed according to detail on page 2.

Design Criteria

Notch depth:	1 inch
Span:	Simple span
Loads:	Live load = 40 psf and dead load = 15 psf
Deflection limit:	L/240 under total load
Sheathing:	APA Rated nailed-glued sheathing

Allowable Floor Spans

Notes:

- The tabulated clear spans are applicable to residential floor construction meeting the above design criteria and are based on a sheathing thickness of 19/32 inch (40/20 or 20 oc) for a joist spacing of 19.2 inches or less and on a sheathing thickness of 23/32 inch (48/24 or 24 oc) for a joist spacing of 24 inches.
- Minimum bearing length shall be 1-3/4 inch for end bearings and 3-1/2 inches for intermediate bearings.
- Bearing stiffeners are not required when I-joists are used in accordance with these tables, except as required for hangers.
- See page 1 for design assumptions. Repair shall be designed according to detail on page 2.

Design Criteria

Notch depth:	1 inch
Span:	Multiple spans
Loads:	Live load = 40 psf and dead load = 15 psf
Deflection limit:	L/240 under total load
Sheathing:	APA Rated nailed-glued sheathing

Allowable Floor Spans

Live load deflection limit of L/480

Notes:

- The tabulated clear spans are applicable to residential floor construction meeting the above design criteria and are based on a sheathing thickness of 19/32 inch (40/20 or 20 oc) for a joist spacing of 19.2 inches or less and on a sheathing thickness of 23/32 inch (48/24 or 24 oc) for a joist spacing of 24 inches.
- Minimum bearing length shall be 1-3/4 inch for end bearings and 3-1/2 inches for intermediate bearings.
- Bearing stiffeners are not required when I-joists are used in accordance with these tables, except as required for hangers.
- See page 1 for design assumptions. Repair shall be designed according to detail on page 2.
