Inspection

Summaries of Engineering Services performed, including Field Test Data.
Location, Elevations and Depths are estimated.

SUMMARY:

Arrived on site as requested by the contractor to perform a third party inspection for a conventional footing at the above referenced site. The design bearing capacity is 2000 psf. Footing measured 16"x 10" minimum with 2 - #4 rebar continuous throughout. Footings were probed and found capable of supporting an allowable soil bearing capacity of 2000 psf. All footings extended beyond the 12" minimum frost line. Footings were free of loose soil, organics, and otherwise appeared to be in satisfactory compliance with minimum standards set out in the 2018 North Carolina Residential Building Code. This work was performed in accordance with accepted engineering practices as required by the 2018 NCRBC. Areas inspected were approved for placement of 3000 psi concrete.
