TE&D Project No.: 2501-020587_B

To Whom It May Concern;

As requested, a representative of Tyndall Engineering & Design, PA (TE&D) was on-site to observe the following item(s):

- 1) Inspect the LVL valley above the front door and garage in regards to the bottom bearing end.

The following conclusions and recommendations were noted:

- 1) We observed the valley had full bearing at the front exterior wall per plan, as well as, the interior (2) 1-3/4" x 14" LVL flush beam. Based on our observations and analysis, the valley bearing locations remain suitable and will provide the required support for the anticipated loading conditions. No structural modifications required.

We appreciate being able to assist you during this phase of the project. If you need further assistance or require additional information, please do not hesitate to contact us.

Sincerely,
Tyndall Engineering & Design
