To whom it may concern,

Canady's Termite and Pest control, in partnership with JSJ builders, will no longer use a liquid chemical method to pre-treat new build homes.

Canady's Termite and Pest control, moving forward will install a termite bait station system upon completion of the build, after final grading has been completed.

This method has been proven to be effective and is more efficient in scheduling between the company and our JSJ partners.

Upon completion, forms 99a/b will be issued to the builder and protection plans will be offered to the consumer.

Thank you,

Canady's Termite and Pest Control
